APPLICATIONS

easyRef

EASY REFRACTION SCREENING SOLUTION

The easyRef™ is an innovative wavefront refractometer that precisely measures refractive errors of patients from 6 months old through adults within just seconds.

The device is designed and engineered to be handy and user-friendly with one-button operation. With the short working distance, the device is extremely easy-to-focus.

Anyone

It refracts children, adults, with or without contact lenses.

Anytime

The test of both eyes is complete in a few seconds, makes it easy to get refraction screening done.

Anywhere

No dark room required. The easyRef works under normal lighting conditions.

For Screening Events

With the easyRef you can screen 100 patients within 20 minutes. The compact and light-weighted design makes it highly comfortable for portable use.

For Primary Care

The easyRef is a cost-effective, essential vision screening tool for general practitioners (GPs) and ophthalmologists. It can be used for home visits or in a health screening van.

For Clinics and Optical Shop

With the easyRef you can reach more patients outside of your practice or use it in some promotion events such as an optical fair or free vision screening marketing campaign.

HIGH EFFICIENCY AND HIGH STABILITY
European Diamond Wheels Group:
Perfect edging. high fineness, durable for long use.
Adaptive Clamp Chuck: Because of the large difference in thickness, the high curved lenses are easy to cause displacement due to axis twisting during processing.
The design of adaptive clamp chuck ensures that the clamping force is balanced during processing to minimize axis twisting and any potential damages to lenses.

OCT-2020

光学相干断层扫描仪

Glaucoma Analysis

Accurately measure the retinal thickness around the fovea and compare it with the age-related normal data to analyze the deviation of patient's retinal thickness, which helps clinicians diagnose glaucoma.

Perform circular scan around the optic papilla, automatically quantify the optic nerve thickness, and compare the thickness with database, so as to Scan Mode examine the atrophy of the optic nerve as an early sign of glaucoma.

Follow-up, a More Efficient Patient Management

Accurate and rapid scan helps follow up the disease changes, making diagnosis more efficient and easier. OCTA2020 can automatically record current scanning position of macular and eyeball and intelligently locate the previous scanning position in the later follow-up examination, to ensure that two scans are in the same position. Based on the trend analysis of retinal thickness in different stages, perform long-term follow-up examinations and trend analysis.

Scan Mode

OCTA2020 has a variety of scan modes, including area scan, HD one line scan and multilines scan.

Area scan: 512*64, range 6mm*6mm/range 12mm*12mm

HD one line scan: 1024*30, length 6mm; 2048*30, length 12mm

Multilines scan: 5 lines parallel scan, Radiation scan, Circular scan

Auto Focus

OCTA2020 can automatically complete the tracking of fundus and macula, detect and calibrate the central part of the pupil, detect and adjust the focus and fault position, and display retina layers of high-definition. The whole acquiring time is limited to 5 seconds, greatly saving the diagnosis time for clinicians

All-in one Design

Step 3
Browse and analyze the acquired images.

Compact Design

Everything is inside this compact body. No external computer is needed. Plug in the power cable, then you are ready to go.

PC Inside

Data acquisition and processing are accomplished by the internal computer. The data can be transported via ethernet or external harddrive. Peripheral devices, such as keyboard or printer, can be connected to the computer ports.

Easy Installation

No complex connection or set up. Compact body can fit in even small space.

Step 1

Choose left or right eye. Push the direction buttons to move the target eye to the center of the field of view, then start data acquisition.

Step 2

Enter the data acquisition interface. The device is able to search for the OCT signal and optimize it automatically.

Simple Operation

Affordable Quality

We believe that less is more. The simple design of Retiview 500 OCT reduces the cost of the device without sacrificing the image quality. OCT has never been so affordable. More people can benefit from the advanced technology now.

YZ-30R

技术参数 FEATURES

The product is designed on the principal basis of Goldman tonometer. Three types are available: R and T Type are suitable for Haag Streit type slit lamp, while Z type is suitable for Carl Zeiss type slit lamp.

Character

It's not only used to examine the eyes, but also measure the intraocular pressure while working under the slit lamp.

Accurate measurement ensures the total tolerance less than $\pm 0.066KPa$ (0.5mmHg).

Directly get the intraocular pressure.

Measured intraocular pressure will not be affected by hardness of eye.

Adjustable measuring pressure ensures the working stability and accurate measurement of tonometer for long time.

Product Description

The instrument is designed based on Goldman tonometer. Both T type and R type are available.

1. When used with Slit Lamp, it can be used to examine the eyes and measure the ocular pressure.
2. Accurate measurement and total tolerance is less than 0.066Kpa (0.55Hg)

3. Directly get the ocular pressure.

4. The measured ocular pressure is not affected by hardness of eye. The affected ocular volume is just 0.56 cubic millimeter.

5. Adjustable measuring ensures the long-term stability and reliability.
