

<h2 style="color: #e67e22;">■ Anaesthesia Needles</h2>	
<h3>■ Spinal Needles (AN-S I)</h3> <ul style="list-style-type: none"> ■ Transparent hub, easy to observe the cerebrospinal fluid discharge. ■ Hub with lock can keep the surface of needle bevel joint well. 	
<h3>■ Spinal Needles (AN-S II)</h3> <ul style="list-style-type: none"> ■ Special design for needle point will not hurt the hard spinal film, close puncture hole automatically and reduce cerebrospinal fluid discharge. Suitable shape and location of side hole ensure enough flux, meanwhile reduce the happening of faulty retardance. 	
<h3>■ Epidural Needles (AN-E)</h3> <ul style="list-style-type: none"> ■ Color coded hub easy for size recognition. ■ Transparent hub convenient for observing outflow of cerebrospinal fluid. The needle tube is scaled for the purpose of depth control. 	
<h3>■ Combined needles (AN-SS I/AN-SS II)</h3> <ul style="list-style-type: none"> ■ Medical grade stainless steel. ■ Combined needles are Spinal needles with introduce needles
