

Product Description

93050V is a Sampling Swab with toothbrush shape cheek & push rod, it has been designed for DNA & Gene detection and Oropharyngeal clinical diagnostic. It is made of medical grade needle-punched fiber and ABS handle, the head is harmless to micro-organisms, thus can enhance the specimen collection. It is a perfect Sampling Swab for the specimen collection and the operation is easy, just press on the push rod to eject the head into the transport medium after finishing specimen collection.
