PrimoPal Motor Co., Ltd. is a joint-venture manufacturing, engineering and trading company, located at the free-trade zone of Shanghai, China. PrimoPal specializes in development, production and selling of various high-quality and cost-effective precision motor and motion control products, including Hybrid stepper motors, PM stepper motors, Linear actuators, Close-loop stepper motors, Brushless DC motors, Brushless servo motors, AC servo motors, PM DC motors, AC induction motors, Synchronous motors, Gear motors, Stepper drives, Brushless DC drives, Hybrid servo drives, AC servo drives, Brushless servo drives, Brush servo drives, Encoders, Spur gearboxes, Planetary gearheads, Brakes, Power supplies, Accessories, and so on.

Since establishment, PrimoPal is committed to providing outstanding quality, economical solutions, impeccable support and after-sales service for every client. Our manufacturing bases are equipped with advanced quality testing devices, precise injection molding machines, auto high-speed punches, auto winding machines and other advanced manufacturing equipment. It makes us have the ability of continuously providing products with superior quality. Besides, we have an engineering team with many years of experience in motor design and application engineering. This ability of offering custom products often gives our customers the great benefit.

For PrimoPal, the customer is not only a buyer, but also a long-term business partner. We work not only to meet their expectations, but also to exceed them through continuous cycles of learning. We believe it is the key to a successful business relationship that understanding our customer's goals, delivering what our customers need and when they need it. To demonstrate our commitment to all our customers, PrimoPal has adopted "Bringing out the Best in Motion" as our official slogan, which means our ultimate goal is to become one of the world's top level companies in the industry of precision motor and motion control system. The pursuit of excellence encourages all PrimoPal employees to forge ahead into improving our business processes and increasing our management efficiency. We have no doubt that our endeavors enable us to maintain strong presence in the competitive market.

Now, let us help you find the right solution for your motor and motion control systems.

Integrated Brushless DC motor

PBLT57	G-1
--------	-----

Brief Introduction of DC Brushless Motor

The electronically commutated motor are characterized especially by their favorable torque characteristics, high power, extremely broad speed range and of course by their unsurpassed service life.

Principles of operation

The differences between a DC motor having a mechanical commutation system and a BLDC motor are mainly found in:

- The product concept
- The commutation of phase currents.

From the user's point of view, DC brushless motors follow the same equations as those with brushes: torque is proportional to current, speed depends on the voltage and the load torque.

The commutation of brushless motors

In the conventional DC motor commutation takes place mechanically through the commutator-and-brush system. In a BLDC motor, commutation is done by electronic means. In that case the instantaneous rotor position must be known in order to determine the phases to be energized.

The angular rotor position can be known by:

- Using a position sensor (Hall sensor, optical encoder, resolver)
- Electronically analyzing the back-EMF of a non-energized winding. This is called sensorless commutation.

Use of Hall sensors

In general, BLDC motor have three phase windings. The easiest way is to power two of them at a time, using Hall sensors to know the rotor position. A simple logic allows for optimal energizing of the phases as a function of rotor position, just like the commutator and brushes are doing in the conventional DC motor.

Use of an encoder or resolver

The rotor position may also be known by use of an encoder or resolver. Commutation may be done very simply, similar to the procedure with Hall sensors, or it may be more complex by modulating sinusoidal currents in the three phases. This is called vector control, and its advantage is to provide a torque ripple of theoretically zero, as well as a high resolution for precise positioning.

Use of Back-EMF analysis

A third option requiring no position sensor is the use of a particular electronic circuit. The motor has only three hook-up wires, the three phase windings are connected in either triangle or star. In the latter case, resistors must be used to generate a zero reference voltage. With this solution the motor includes no sensors or electronic components and it is therefore highly insensitive to hostile environments. For applications such as hand-held tools, where the cable is constantly moved, the fact of just three wires is another advantage.

Loss calculation of BLDC motors

It follows the same equations as the DC motor using mechanical commutation except that parameters like iron losses and losses in the drive circuit are no longer negligible in applications where efficiency is of prime importance.

Iron losses

They depend on speed and motor poles, in the torque formula, may be introduced as viscous friction. The equation for useful motor torque becomes:

$M_m = k \cdot I_m - k_v \cdot \omega - M_f$
 M_m=Motor useful torque
 k =Torque constant
 I_m =Motor current
 k_v =Viscous coefficient for iron losses
 w =Angular velocity
 M_f =Bearing friction

P_{tr}=P_h+P_{ec}+P_e
 P_{tr} : Iron losses
 P_h : Hysteresis losses
 P_{ec}: Eddy current losses
 P_e : Additional losses

The iron loss is proportional to the square of the magnetic field intensity, and the iron loss is proportional to the 1.3-1.5 power of the frequency. Frequency=Speed * Poles' pair/60

Losses in the electronics

The current and voltage required by the motor and the drive circuit to be operated at the desired speed and torque depend also on the drive circuit. As an example,a driver bridge in bipolar technique will reduce the voltage available at the motor terminals by about 1.7V, and the total current must include the consumption of the circuitry.

Losses in the electronics

- For commutation,position sensors are necessary when operating in incremental mode
- Sensorless commutation is recommended only for applications running at constant speed and load such as fan applications.

Indications Of Motor Data

Nominal Voltage Unit: V

Nominal voltage is the applied voltage between powered phases in block commutation. All nominal data refer to this voltage. Lower and higher voltage are permissible, provided that limits are not exceeded.

Nominal Torque Unit: N.m

Nominal Torque is the torque generated for operation at nominal voltage and nominal current at a motor temperature of 25°C, It is at the limit of the motor's continue operation range. Higher torques heat up the winding too much.

Nominal Speed Unit: rpm

Nominal speed is the speed set for operation at nominal voltage and nominal torque at a motor temperature of 25°C.

Torque Constant Unit: N.m/A

This may also be referred to as specific torque and represents the quotient from generated torque and applicable current.

INNER ROTOR BRUSHLESS MOTOR

A

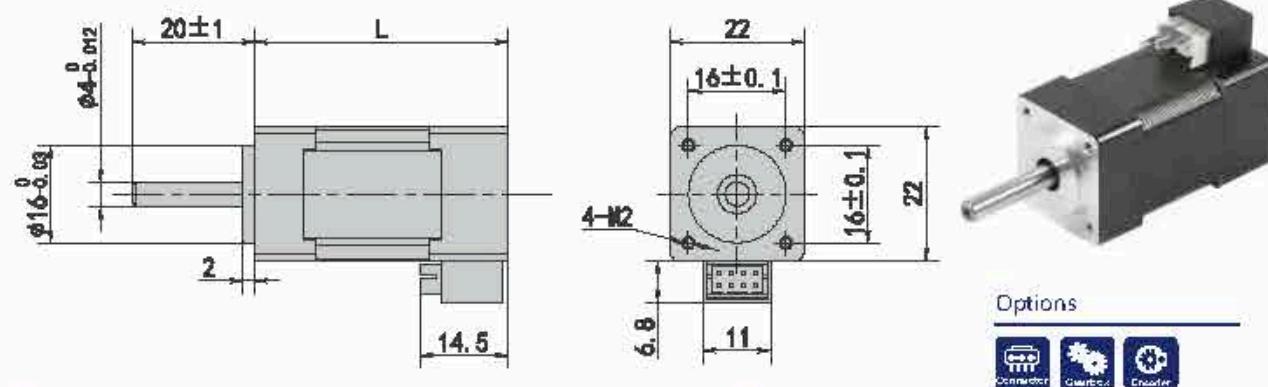

Inner Rotor Brushless Motor

Brushless DC motor is composed of motor body and driver, which is a typical mechatronics product. The stator windings of the motor are mostly made of three phase symmetric star connection, which is very similar to three-phase asynchronous motor. A magnetized permanent magnet is attached to the rotor of the motor. In order to detect the polarity of the rotor, a position sensor is installed in the motor. The driver is composed of power electronic devices and integrated circuits, etc. Its functions are: to accept the start, stop and brake signals of the motor to control the start, stop and brake of the motor; It receives position sensor signals and positive and negative rotation signals, which are used to control on and off of each power tube of the inverter bridge and generate continuous torque. Accept speed instruction and speed feedback signal, used to control and adjust the speed; Provide protection, display, and so on.

PBLS22HEL Series

Inner Rotor BLDC Motor

General Specifications

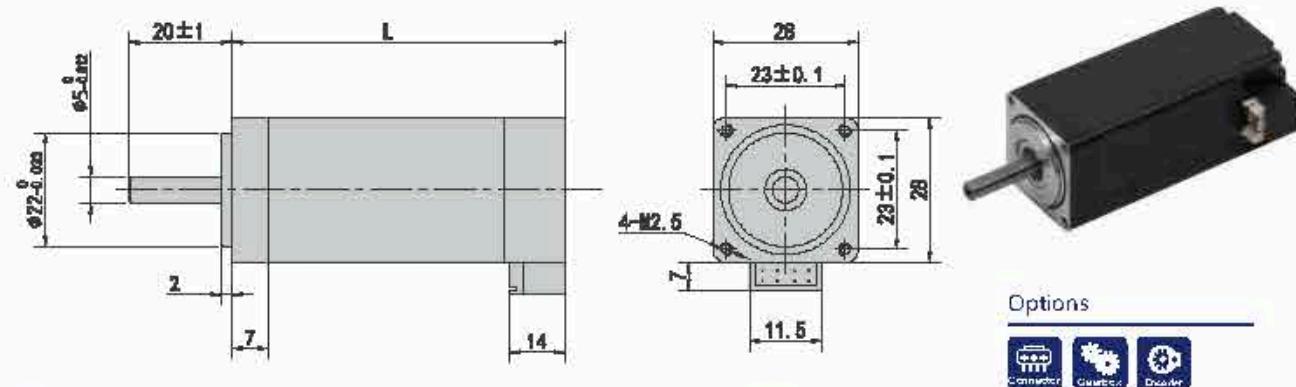

Winding Type	Star/Delta
Hall Effect Angle	Electrical Angle of 120 degree
Radial Play	0.02mm@450g
Axial Play	0.08mm@450g
Max radial force	(5N 10mm From the flange)
Max axial force	2N
Dielectric Strength	360VAC/1S
Insulation Resistance	100MΩ,500VDC
Ambient Temperature	-20°C~+50°C
Insulation Class	Class B

OUTER ROTER BLDC MOTOR SERIES

B

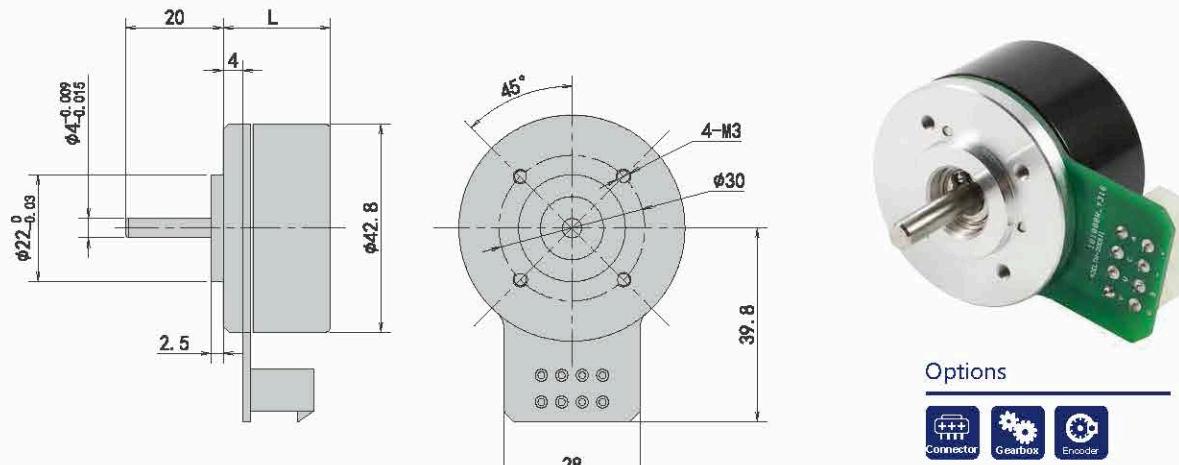

Outer Rotor BLDC Motor Series

Outer rotor brushless dc motor a rotor inside and a much higher moment of inertia of the rotor(on the main quality is concentrated in the shell of the rotor), so the speed slower than inner rotor motor, which can be used to directly drive the load, and eliminate the mechanical retarding mechanism, especially suitable for low speed high torque, small volume, high output power.

PBL42EHL Series

Outer Rotor BLDC Motor

General Specifications

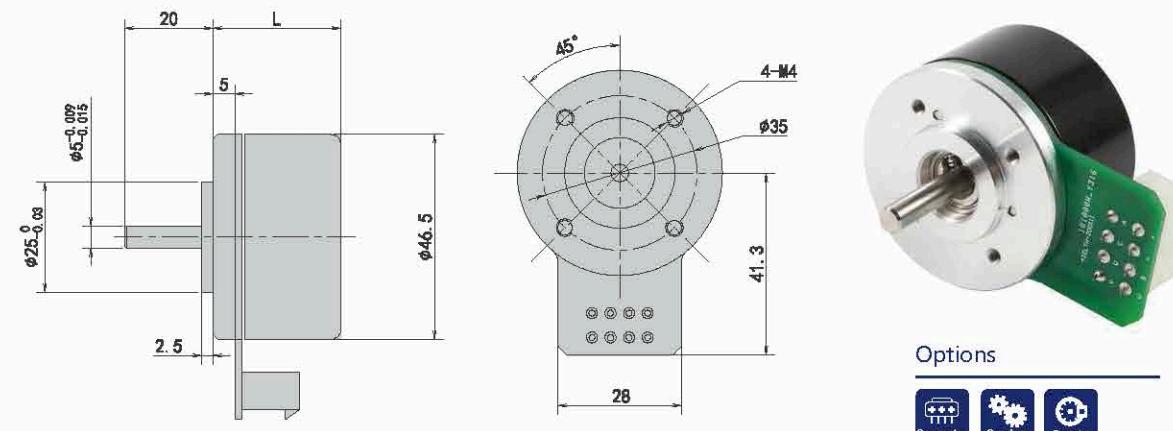

Winding Type	Star/Delta
Hall Effect Angle	Electrical Angle of 120 degree
Radial Play	0.02mm@450g
Axial Play	0.08mm@450g
Max radial force	(20N 10mm From the flange)
Max axial force	10N
Dielectric Strength	600VAC/1S

ECONOMICAL BRUSHLESS MOTOR SERIES

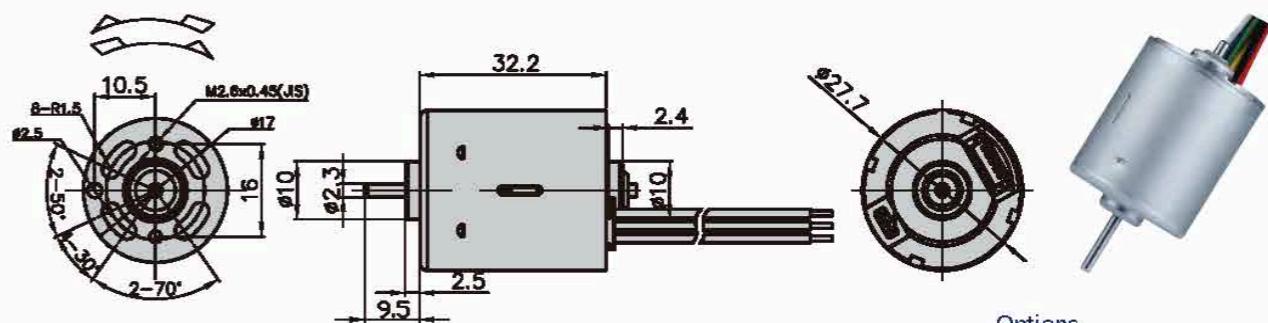

PBL27CEY-S Series

Economical BLDC Motor

Economical Brushless Motor Series

Referring to the structure design of brushless motor, brushless motor electromagnetic design is adopted to produce low cost brushless motor. Based on the excellent characteristics of brushless motor, the cost of motor is effectively optimized.

PBL27CEY-M Series

Economical BLDC Motor

Options

General Specifications

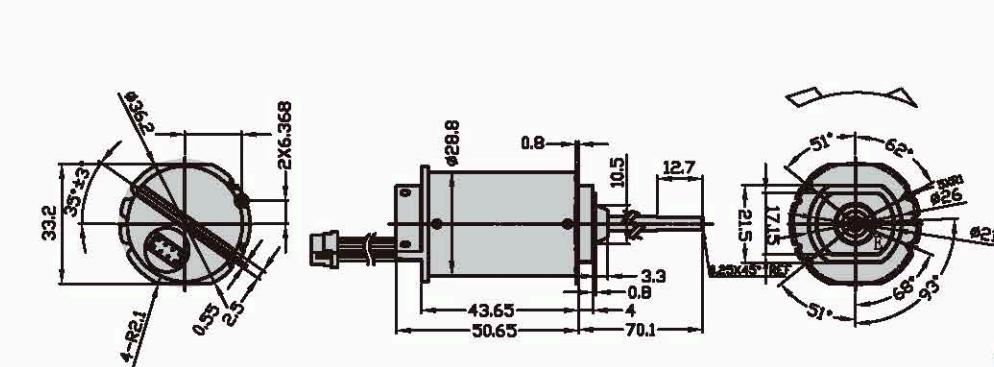

Winding Type	Star/Delta
Hall Effect Angle	Electrical Angle of 120 degree
Radial Play	0.02mm@450g
Axial Play	0.08mm@450g
Max radial force	(5N 10mm From the flange)
Max axial force	2N
Dielectric Strength	600VAC/1S
Insulation Resistance	100MΩ,500VDC
Ambient Temperature	-20°C~+50°C
Insulation Class	Class B

■ Motor Specifications

Motor Model			PBL27CEY-M120129	PBL27CEY-M1215127
Voltage	Opera Ting Range		-----	-----
	Nominal		12.0V Constant	12.0V Constant
No Load	Speed	rpm	2900	12700
	Current	A	0.67	0.31
At Maximum Efficiency	Speed	rpm	2248	10730
	Current	A	0.28	1.79
	Torque	g-cm	62.55	140.3
		mN-m	6.13	13.75
	Output	W	1.44	15.46
	Eff	%	55	76
Stall	Current	A	0.82	8.61
	Torque	g-cm	267.59	803.31
		mN-m	26.23	78.76

PBL36CEY-SL Series

Economical BLDC Motor

Options

PLANETARY GEARBOX BRUSHLESS MOTOR

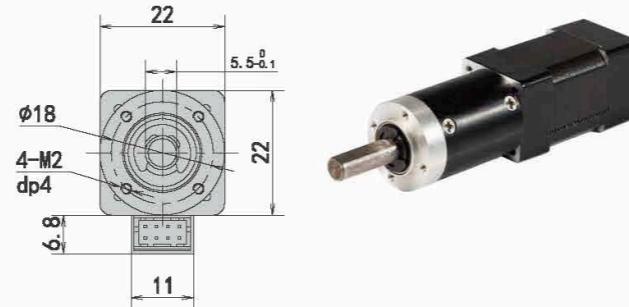

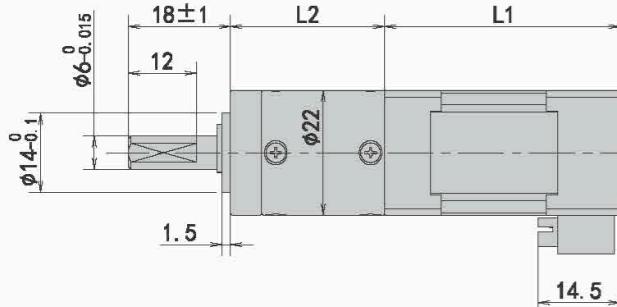

Planetary Gearbox Brushless Motor

Planetary gearbox brushless Motor has the characteristics of high precision, high rigidity, high load, high efficiency, high speed ratio, high life, low inertia, low vibration, low noise, low temperature rise, beautiful appearance, light structure, easy installation, accurate positioning and so on.

PBLS22GEL Series

Planetary Gearbox BLDC Motor

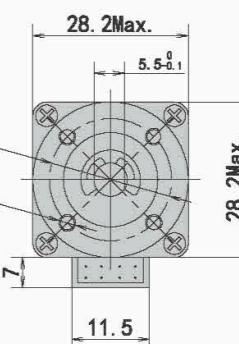

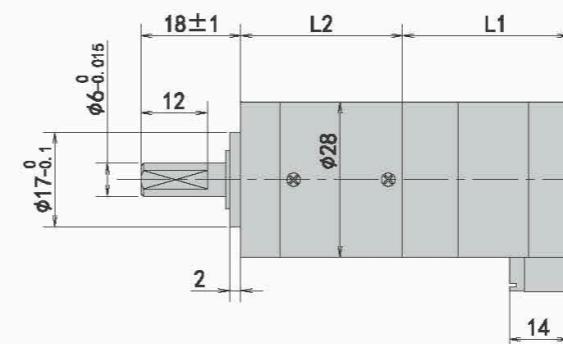

Motor Specifications

Motor Model	Unit	PBLS22GEL240440	PBLS22GEL240840	PBLS22GEL241840
Number of Phase			3

FRAMELESS BRUSHLESS DC MOTOR

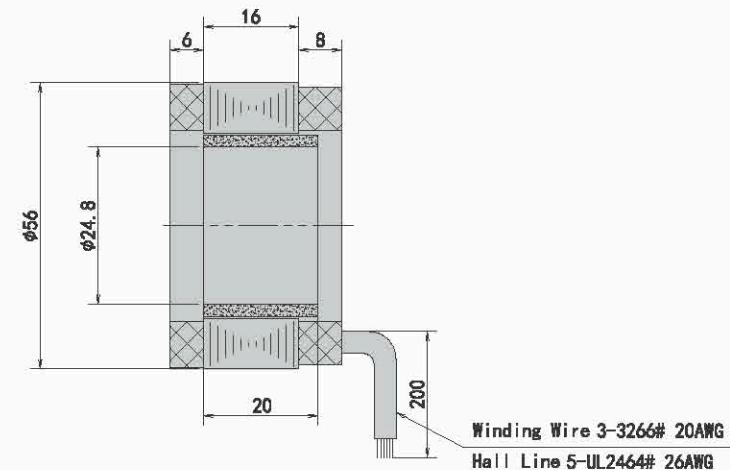

Frameless Brushless DC Motor

The multi-pole torque servo motor has the characteristics of low speed, large torque, strong overload capacity, fast response, good linearity and small torque fluctuation, which can drive the load directly without reducing gear, thus improving the operation accuracy of the system.

PBL56FHS Series

Frameless brushless DC motor

General Specifications

Winding Type	Star/Delta
Dielectric Strength	600VAC/1S
Insulation Resistance	100MΩ,500VDC
Ambient Temperature	-20°C~+50°C
Insulation Class	Class B

General Specifications

BLDC Motor Drivers

DBLS series DC input driver is based on advanced digital current and speed control technology, can provide strong torque output, stable rotational speed, low noise. Hope that our products with superior performance, high quality and excellent cost performance can bring you more convenience.

According to customer demand for different voltage, different power, different speed, brushless drives divided into various types of high voltage and low voltage with different current.

■ How to choose a suitable drive

Driver voltage:

Working voltage is the driving voltage to the motor supplied by customer. The suitable voltage has a great influence on the driver. With a certain power, the higher the voltage, the smaller the current. The conventional power supply voltage are 24V, 36V, 48V , 110VAC and 220VAC.

Drive current:

Current is the indicators to judge the drive capability, is one of important indicators to select the drive, usually the maximum continuous current of the drive is slightly more than the rated current of the motor. Normally drive current is 4A, 5A, 8A, 10A, 15A, 30A.

1. According to the power supply voltage, the working conditions, drag the object to choose a brushless drive and motor. Requires power supply voltage and motor rated voltage.
 2. Choose different types of brushless drive and motor according to the installation location and working environment.
 3. According to the capacity, power, power factor, speed to choose brushless drive and motor, If the capacity choice is too small, the motor will be in a critical condition for a long time, which affects the life of the brushless driver, and even burned.

	Model No.	Input Voltage	Continuous Current	Adapt Motor (mm)	Dimension	Weight
Low Voltage Drives	PBLR3605D	24-36VDC	5.0A	42、57、60	163*83*30mm	0.35Kg

Characteristics

- Standard Input voltage 24VDC/36VDC
- Max. input overload current protection:5A
- Accelerate time constant Default:2sec
others can be customized

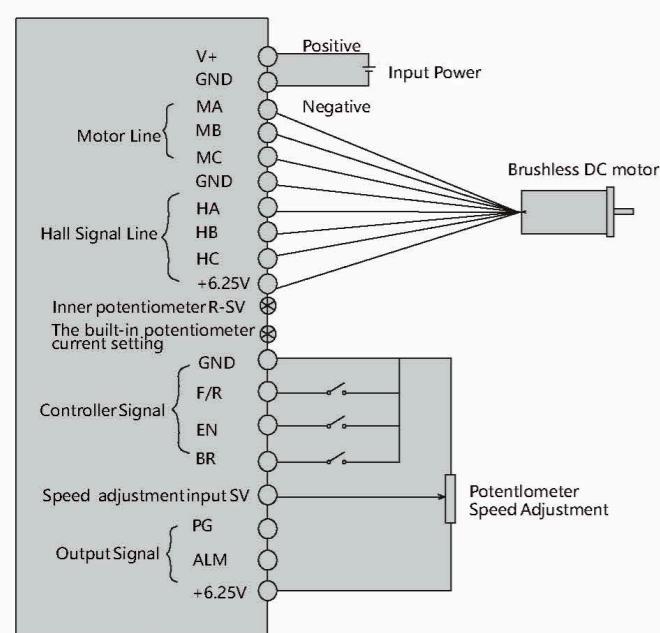

Dimension

Specification

- PID speed, current double loop regulator
- High performance, low price
- 20KHZ Chopper frequency
- Star/stop control, CW/CCW control
- Blocking protection
- Speed split function, get different speed by dialing code switch
- Electrical stop to ensure the quickly action of motor
- Over load radio larger then 2, torque always can achieve the max in low speed
- Provide OVP, LVP, OCP, OTP, illegal horal signal and other fault alarm
- Dimension: 163x83x30mm

1	V+	DC+24V input
2	GND	DC 0V input

Motor input terminal

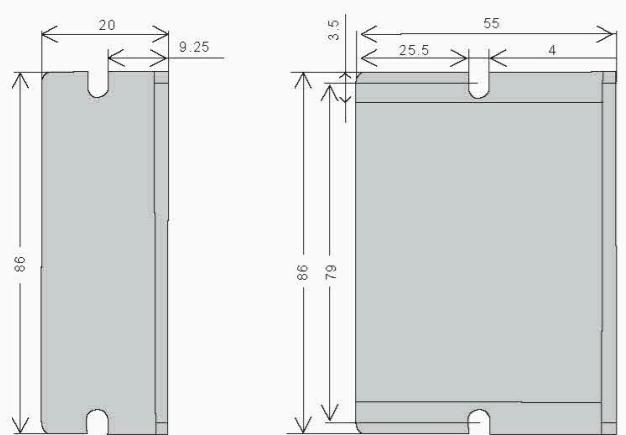

1	MA	Motor Phase A
2	MB	Motor Phase B
3	MC	Motor Phase C
4	GND	GND
5	HA	Hall signal A
6	HB	Hall signal B
7	HC	Hall signal C
8	+5V	Hall signal power supply

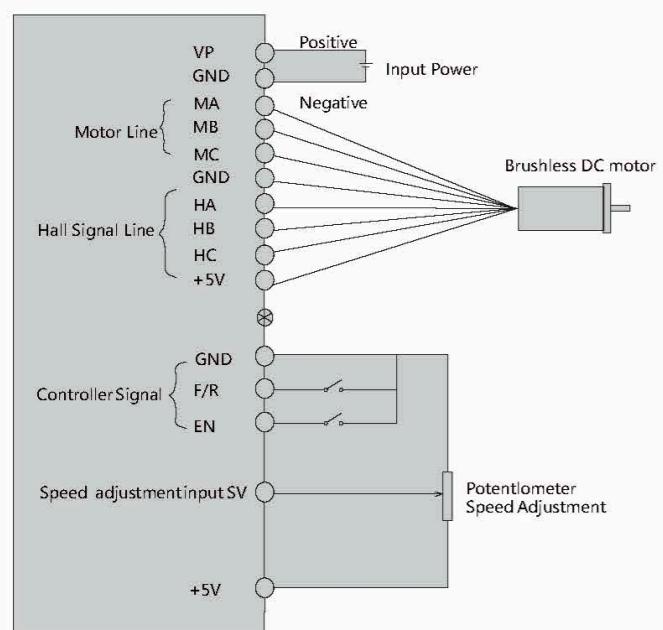

Characteristics

- Input Voltage: 24VDC (8VDC~ 30VDC)
- Continuous Output current: 4A(for < 100W motors)
- Max. Output current: 7A
- Working temp.: 0~+45°C
- Storage temp.: -20~+85°C

Dimension

Connection Diagram

Power input terminal

1	V+	DC+24V input
2	GND	GND

Motor input terminal

1	MA	Motor Phase A
2	MB	Motor Phase B
3	MC	Motor Phase C
4	GND	GND
5	HA	Hall signal A
6	HB	Hall signal B
7	HC	Hall signal C
8	+5DC	Hall signal power supply

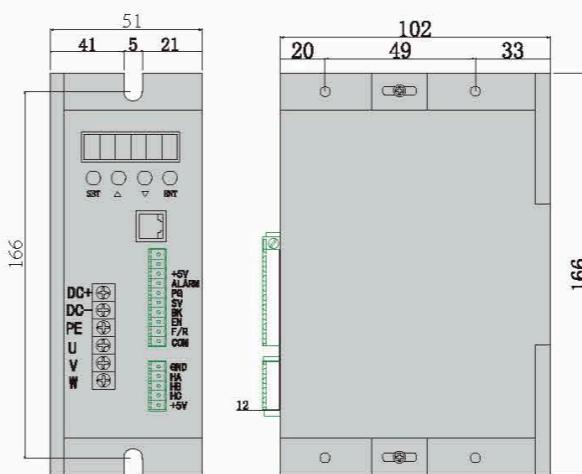

Characteristics

- Input Voltage: 24VDC~48VDC
- Continuous output current: 10A
- Max input over-load protection current: 20A
- Current protection: current >10A for 3-6 sec, off output
- Working temp.: 0~+45
- Storage temp.: -20~+85
- Storage temp.: -20~+85

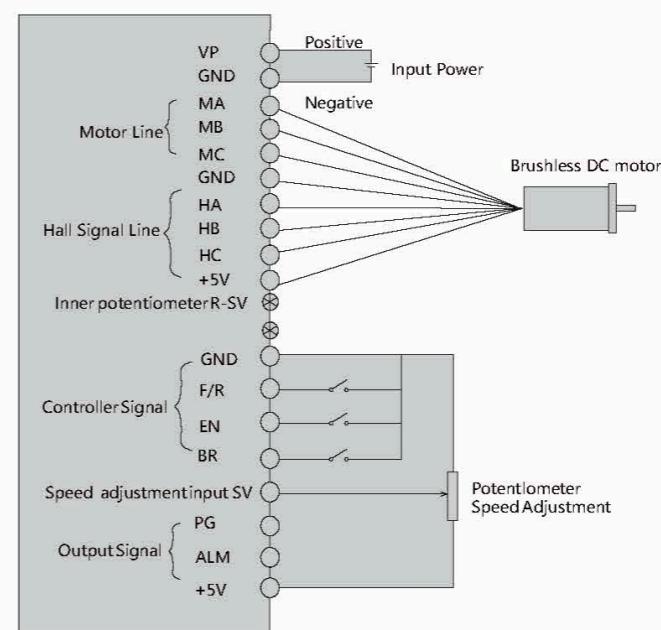

Specification

- Closed-loop control, constant torque output
- Standard Modbus protocol, RS485 multi-axis control
- Photoelectric isolation of input and output signal
- External analog quantity and external pulse width input
- Start/stop control, CW/CCW control
- Electrical stop to ensure the quick action of motor
- Blocking protection, fast response and high control precision
- Loading does not slow down, power compensation, strong starting torque
- Over load ratio larger than 2, torque always can achieve the max in low speed
- Provide OVP, LVP, OCP, OTP, illegal hysteresis signal and other fault alarm
- Dimension: 166x102x51mm

Motor input terminal

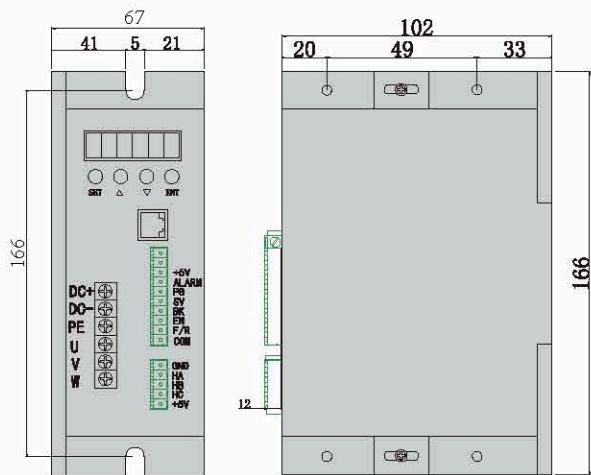

1	+5V	Output power terminal
2	SV	Input signal terminal
3	COM	Com terminal
4	F/R	CW/CCW terminal
5	EN	Enable terminal
6	BR	Brake terminal
7	ALARM	Alarm terminal
8	PG	Speed terminal

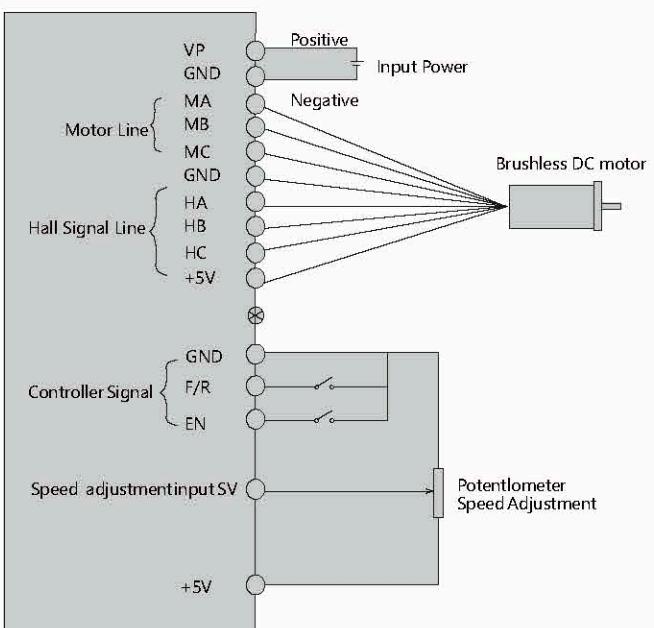

Characteristics

- Input Voltage: 110/ 220VAC, 50/60Hz
- Continuous Output current: 3.5A(for <750W motor)
- Max. Output current: 7A
- Working temp.: 0~+45°C
- Storage temp.: -20~+85°C
- Structure: wall-mountable box type
- Cooling: Radiator
- Control terminals: Isolation

3	COM	Com terminal
4	F/R	CW/CCW terminal
5	EN	Enable terminal
6	BR	Brake terminal
7	ALARM	Alarm terminal
8	PG	Speed terminal

Characteristics

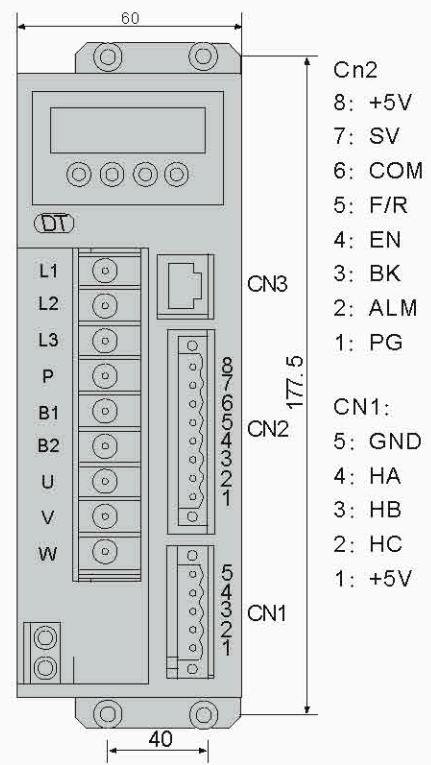

- Input Voltage: 110/ 220VAC, 50/60Hz
- Continuous Output current: 2.0A(for <500W motors)
- Max. Output current: 4A
- Working temp.: 0~+45°C
- Storage temp.: -20~+85°C
- Structure: wall-mountable box type
- Cooling: Radiator
- Control terminals: Isolation

Specification

- Closed-loop control,constant torque output
- Standard Modbus protocol, RS485 mult axis control
- Photoelectric isolation of input and output signal
- External analog quantity and external pulse width input
- Start/stop control,CW/CCW control
- Electrical stop to ensure the quickly action of motor
- Blocking protection,fast response and high control precision
- Loading does not slow down,power compensation, strong starting torque
- Over load radio larger then 2,torque always can achieve the max in low speed
- Provide OVP,LVP,OCP,OTP,illegal horal signal and other fault alarm
- Panel:6 digit LED display,4 digit keypad operation
- Dimension: 145x60x125mm

Power Terminal and Motor Terminal

No.	Terminal Name	Signal	Function
1	L1(L)®	Power input of main circuit	Main circuit power input terminal AC220V 50Hz, Connect L1 and L2 while using single phase voltage 220V
2	L2(N)(S)		
3	L3(T)		
4	P	High voltage DC bus line terminal	DC bus line terminal in driver, rated power 315V
5	B1	internal brake resistance	When using internal brake resistance, short circuit B1 and B2, when the power is not enough, need to use external brake resistance, break B1 and B2, connect external brake resistance with P and B2
6	B2	external brake resistance	
7	U(MA)	Output	The motor terminals must be connected with U,V,W one-to- one. Attention: do not reverse the motor by exchange 3 phase terminals, it is completely different with asynchronous motor
8	V(MB)		
9	W(MC)		
	PE	Protection	The release way is supplied for protection motor and drive when current leakage

Characteristics

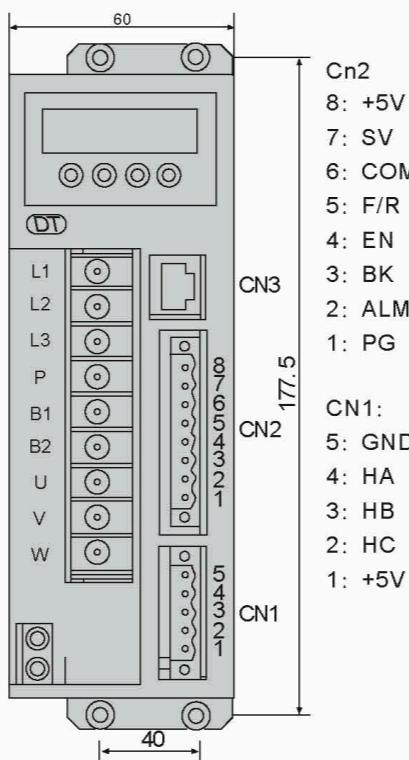

- Input Voltage: 110/ 220VAC, 50/60Hz
- Continuous Output current: 2.0A(for <500W motors)
- Max. Output current: 4A
- Working temp.: 0~+45°C
- Storage temp.: -20~+85°C
- Structure: wall-mountable box type

INTEGRATED BRUSHLESS DC MOTOR

PBLT57 Series

Integrated brushless DC motor

Integrated Brushless DC motor

- Working voltage: DC input voltage 15VDC~50VDC, recommended working voltage 36V
- The maximum continuous output current is 10A, and the maximum peak current is 22A (3 times the overload capacity)
- Accept differential and single-ended pulse/direction commands, with position/speed/torque three control modes
- Adopt FOC magnetic field positioning control technology and space vector pulse width modulation (SVPWM) control technology
- The number of pulses per revolution can be set by debugging software or dialling code (electronic gear ratio)
- Can choose 100W, 140W and 200W three brushless DC servo motors
- With protection functions such as overvoltage, under voltage, overcurrent and over-tolerance
- Single/double pulse mode, pulse valid edge optional
- The maximum pulse frequency of the control command is 500KHz (the factory default is 200KHz)
- Pulse, direction and enable signal input interface level is 5-24V compatible
- With serial port RS232 debugging function, but the company's dedicated serial port debugging cable is required
- Performance: stable speed, small overshoot, small tracking error, low heat of motor and driver

Electronic gear ratio(driver breakdown table)

Pulse/rew	SW1	SW2	SW3	SW4
Default	on	on	on	on
800	off	on	on	on
1600	on	off	on	on
3200	off	off	on	on
6400	on	on	off	on
12800	off	on	off	on
25600	on	off	off	on
51200	off	off	off	on
1000	on	on	on	off
2000	off	on	on	off
4000	on	off	on	off
5000	off	off	on	off
8000	on	on	off	off
10000	off	on	off	off
20000	on	off	off	off
40000	off	off	off	off

Suitable for standard motor

Model No.	Rated power	Drive+encoder+length
	W	Length(mm)
PBLT57-09	100W	107±1
PBLT57-13	140W	127±1
PBLT57-18	200W	147±1

Function setting

Initial orientation of motor		
Direction	SW5	Remark
CCW	off	Counterclockwise
CW	on	Clockwise
Drive control mode setting		
Drive control mode	SW6	Remark
FOC	off	Apply to screw
PM	on	Apply to belt

Electrical Specifications

Parameters	Minimum value	Typical value	Minimum value	Unit
Output	0	-	10	A
Power Supply Voltage(DC)	15	36	50	Vdc
Control signal input current	6	10	16	mA
Logic input voltage	5	5	24	Vdc
Pulse frequency	0	-	200	kHz
Pulse high-level width	1.5	-	-	uS
Accuracy of position error control	-	±1	-	Pulse
Speed control accuracy	-	±2	-	rpm
Maximum acceleration(no load)	-	100	-	rpm/ms
Motor speed	3500	-	-	RPM
Insulation Resistance	100	-	-	MΩ
