PrimoPal Motor Co., Ltd. is a joint-venture manufacturing, engineering and trading company, located at the free-trade zone of Shanghai, China. PrimoPal specializes in development, production and selling of various high-quality and costeffective precision motor and motion control products, including Hybrid stepper motors, PM stepper motors, Linear actuators, Closeloop stepper motors, Brushless DC motors, Brushless servo motors, AC servo motors, PM DC motors, AC induction motors, Synchronous motors, Gear motors, Stepper drives, Brushless DC drives, Hybrid servo drives, AC servo drives, Brushless servo drives, Brush servo drives, Encoders, Spur gearboxes, Planetary gearheads, Brakes, Power supplies, Accessories, and so on.

Since establishment, PrimoPal is committed to providing outstanding quality, economical solutions, impeccable support and after-sales service for every client. Our manufacturing bases are equipped with advanced quality testing devices, precise injection molding machines, auto high-speed punches, auto winding machines and other advanced manufacturing equipment. It makes us have the ability of continuously providing products with superior quality. Besides, we have an engineering team with many years of experience in motor design and application engineering. This ability of offering custom products often gives our customers the great benefit.

For PrimoPal, the customer is not only a buyer, but also a long-term business partner. We work not only to meet their expectations, but also to exceed them through continuous cycles of learning. We believe it is the key to a successful business relationship that understanding our customer's goals, delivering what our customers need and when they need it. To demonstrate our commitment to all our customers, PrimoPal has adopted "Bringing out the Best in Motion" as our official slogan, which means our ultimate goal is to become one of the world's top level companies in the industry of precision motor and motion control system. The pursuit of excellence encourages all PrimoPal employees to forge ahead into improving our business processes and increasing our management efficiency. We have no doubt that our endeavors enable us to maintain strong presence in the competitive market.

Now, let us help you find the right solution for your motor and motion control systems.

P

上海砾锋机电有限公司是一家合资制造、工程和贸易公司，位于中国上海自贸区。砾锋专业研发、生产和销售各种高品质、高性价比的精密电机和运动控制产品，包括混合式步进电机、永磁步进电机、直线执行器、闭环步进电机、无刷直流电机、无刷伺服电机、交流伺服电机、永磁直流电机、交流感应电机、同步电机、齿轮电机、步进驱动器、无刷直流驱动器、混合伺服驱动器、交流伺服驱动器、无刷伺服驱动器、有刷伺服驱动器、编码器、正齿轮箱、行星齿轮箱、制动器、电源、配件等。

自成立以来，砾锋致力于提供卓越品质、经济的解决方案，无可挑剔的为每一位客户提供支持和售后服务。生产基地拥有先进的质量检测设备、精密注塑机、自动高速冲床、自动绕线机等先进制造设备。它使我们有能力持续提供质量上乘的产品。此外，我们拥有一支具有多年电机设计和应用工程经验的工程团队。这种提供定制产品的能力通常会给我们的客户带来巨大的好处。

对于砾锋来说，客户不仅是买家，也是长期的业务合作伙伴。我们不仅要满足他们的期望，还要通过不断的学习来了解他们。我们相信，了解客户的目标、交付我们的客户服务是建立成功业务关系的关键。客户需要以及何时需要。为了向所有客户展示我们的承诺，砾锋采用“展现最佳动态”作为我们的官方口号，这意味着我们的最终目标是成为精密电机和运动控制系统行业的世界顶级公司之一。我们鼓励所有砾锋员工锐意进取，改进我们的业务流程并提高我们的管理效率。毫无疑问，我们的努力使我们能够在竞争激烈的市场中保持强势地位。

现在，让我们帮助您找到适合您的电机和运动控制系统的解决方案。

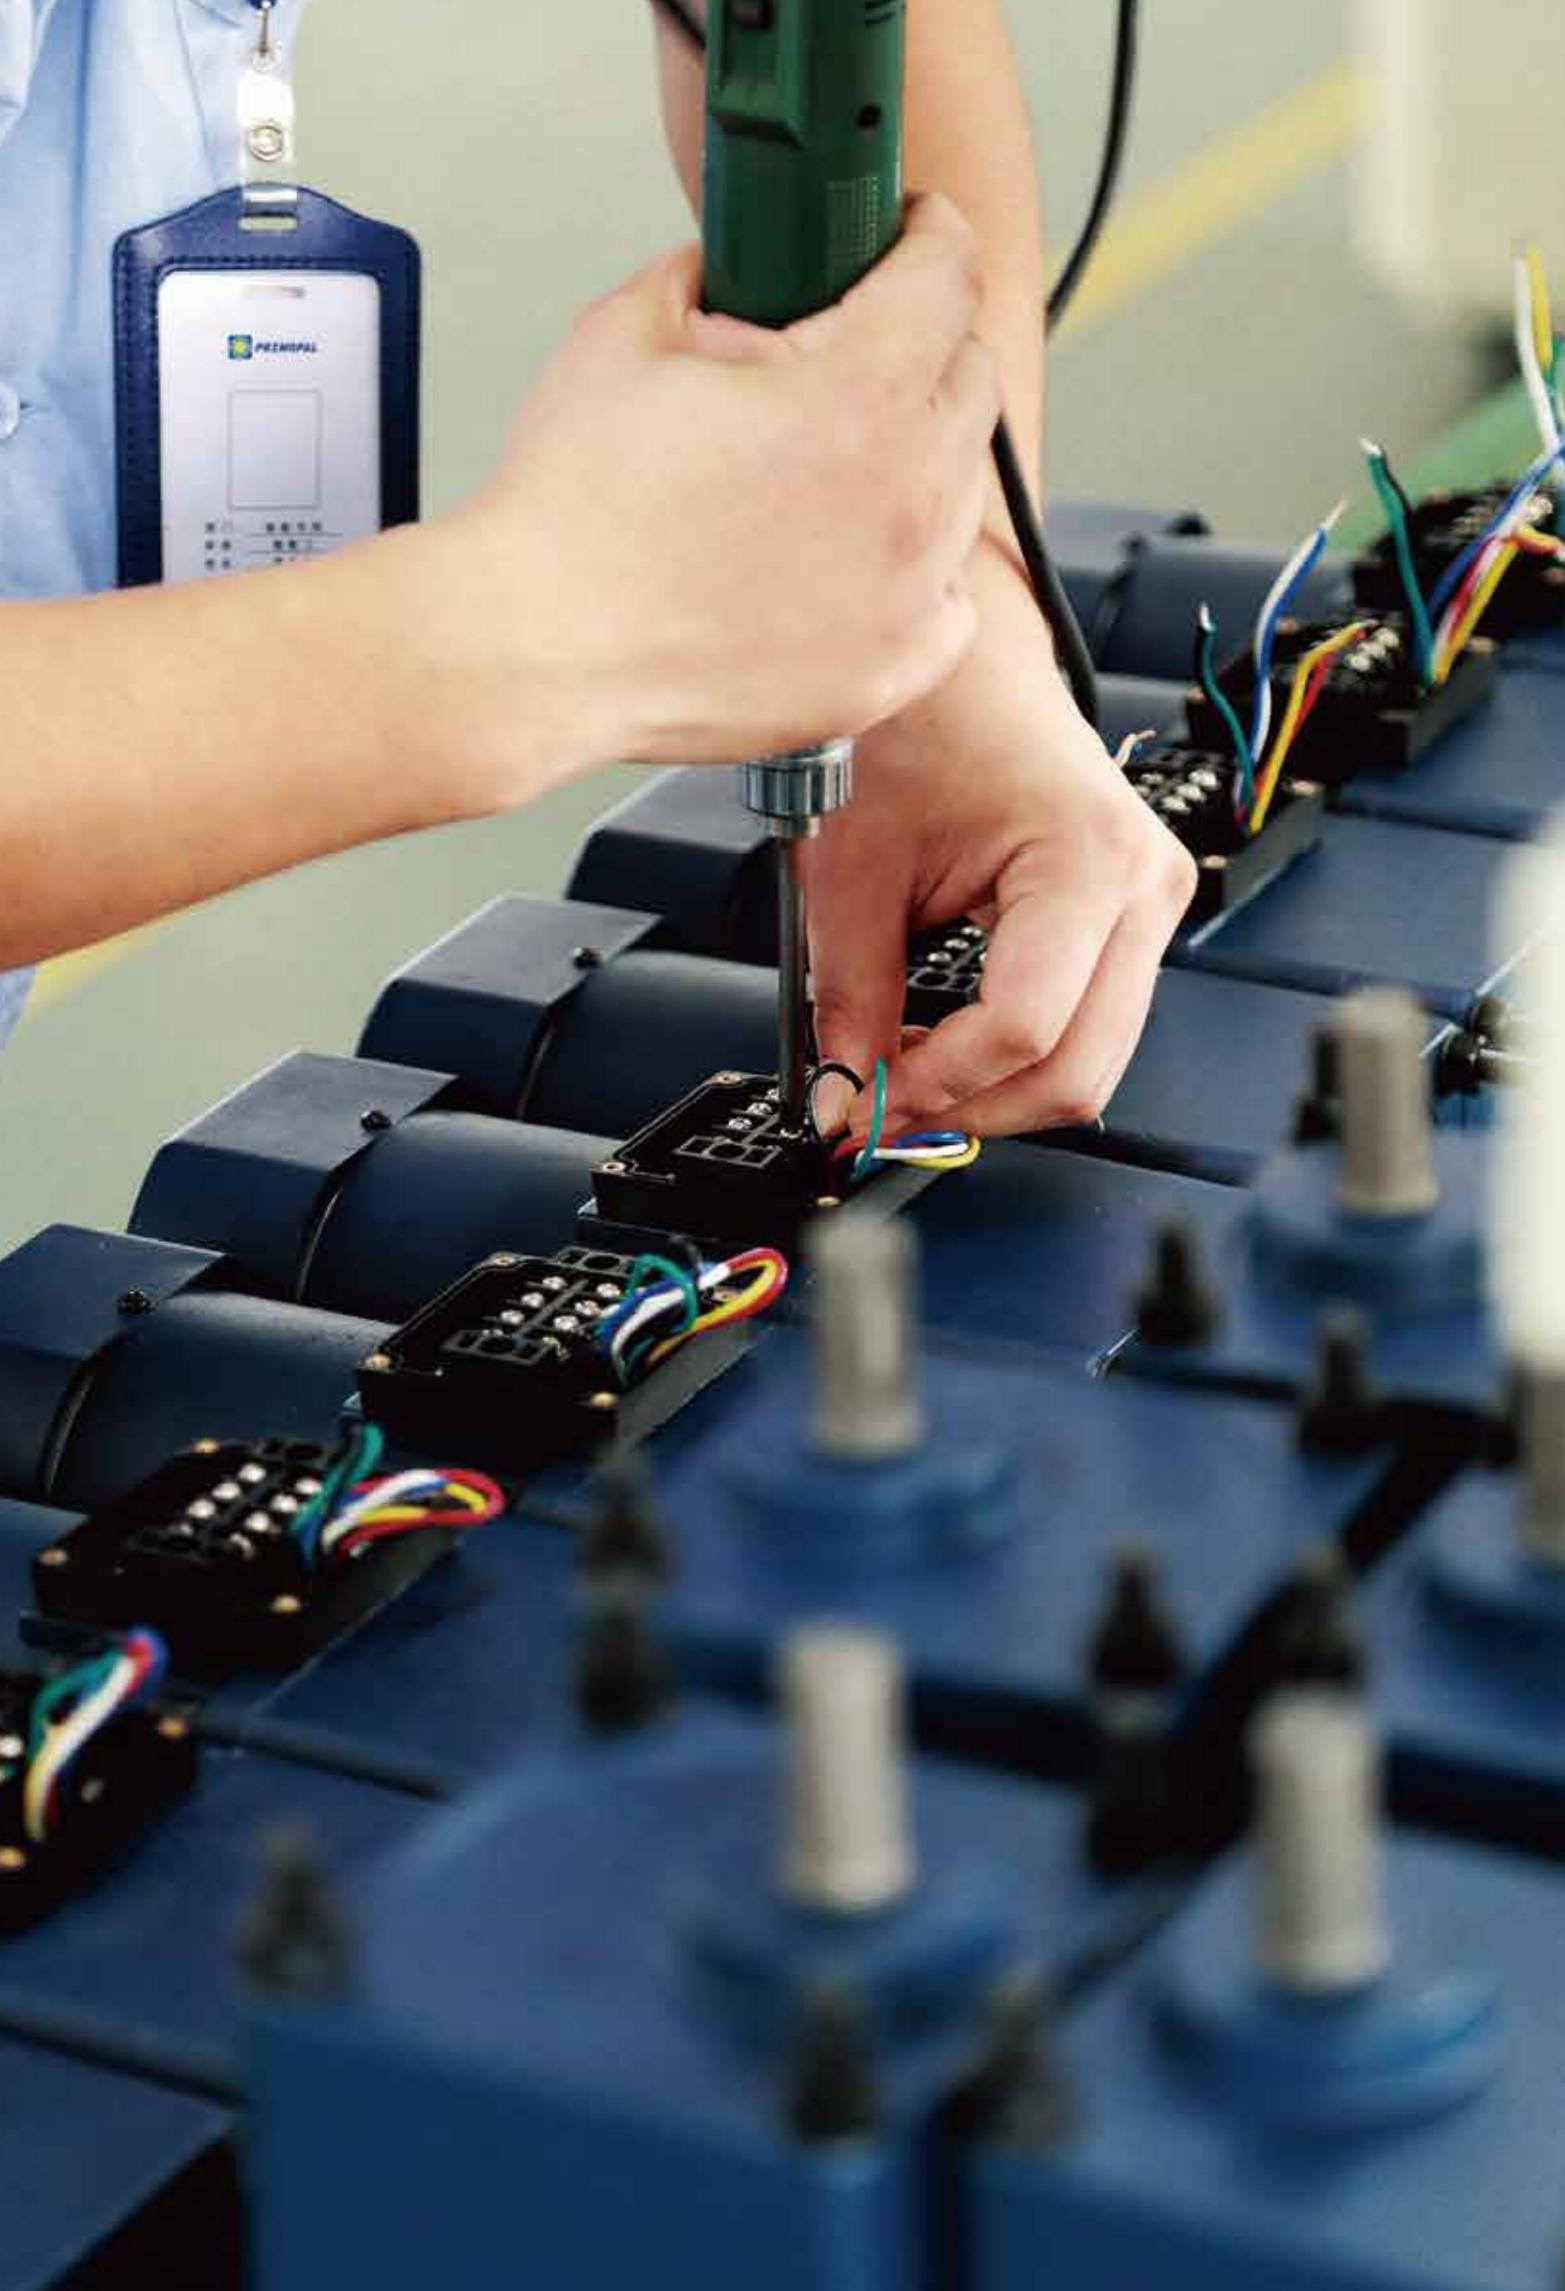

设备是保证产品品质的关键，我们本着工欲善其事，必先利其器的观念，引进国内最先进的生产设备，让科技贯穿生产的始终。科学的管理使其严谨、有序的运作，充分利用其资源，实现效益最大化。

The equipment is the key to the assurance of the product quality. Under the concept of always sharpen your tools before you start your work we introduced a number of advanced equipment to make products scientifically in the all way of the production. The scientific management means a rigorous and orderly operation to make full use of re source and achieve the maximum benefits.

值得您信赖的精密马达合作伙伴
Bring Out the Best in Motion

砾锋的创业是与人共创的事业,砾锋的发展就是在与人合作中的发展,追求的是共享成功。

PRIMOPAL entrepreneurship is a business created with others, and PRIMOPAL development is development in cooperation with others, and the pursuit of shared success.

微型交流减速电机

MICRO AC GEAR MOTORS

值得您信赖的精密马达合作伙伴

减速电机的一般规格

GENERAL SPECIFICATIONS OF GEAR MOTORS

● 6W~200W型

项目 Items	规格 Specifications
绝缘电阻 Insulation Resistance	于常温·常湿下的电机额定运行后,以DC500V电阻表测量线圈外壳间时,测量值为100MΩ以上 In the circumstance of normal temperature and humidity, the resistance can be up to 100MΩ, measured DC 500V insulation resistance between the motor wiring and motor shell while the motor is working. *
绝缘耐压 Insulation voltage	于常温·常湿下电动机额定运行后,在线圈外壳间施加一分钟 50Hz 或 60Hz、1.5kV(三相380V为1.8kV)的电压,亦无异常 In the circumstance of normal temperature and humidity there will be no problem supplying the power of 1.5kV(three-phase 380V is 1.8kV) at 50Hz/60Hz between the metal wiring and motor shell for 1 minute while the motor is working.
温度上升 Temperature Rise	在装上减速机或同等散热板*并于常温·常湿下进行额定运行时,以电阻法测定其线圈温度上升值为80°C以下(三相型为70°C以下) The temperature rise of winding are 80°C or less measured by the resistance change method after rated motor operation under normal ambient temperature and humidity, with connecting a gearhead or equivalent heat radiation plat.
绝缘等级 Insulation Class	UL/CSA 规格:A种(105°C)、EN规格:B种(130°C)、F种(155°C) UL/CSA Standards:Class A (105°C) EN Standards:Class B (130°C), Class F (155°C)
过热保护装置 Overheat Protection	内藏热保护装置(自动复位型) B种(开放:120°C±5°C, 80°C±15°C) F种(开放:145°C±5°C, 95°C±15°C) Thermal protector inside (automatic return) Class B (opening:120°C±5°C, 80°C±15°C) Class F (opening:145°C±5°C, 95°C±15°C)
使用环境温度 Ambient Temperature	单相100V、三相200V-10~+50°C(无结冰) 其他电压-10°C~+40°C(无结冰) Single-phase 100VAC.Three-phase 200VAC:-10°C~+50°C (Non Freezing) Others:-10°C~+40°C (Non Freezing)
使用环境湿度 Ambient Humidity	85%以下(无结露) ≤85% (Non condensing)
保护等级 Protection Class	导线型Lead wire type:IP20 接线盒型 Terminal box type 单相 Single-phase 100V 50/60HZ, 110/120V 60HZ, 220/230V 50Hz, 220/230V 60Hz 25W~180W Type P54 (不包括圆轴安装面 Excluding the installation surface of the round shaft type) 三相 Three-phase 200V/220V/230V 50/60HZ, 380/400/415V 50/60HZ 25W~180W Type P54 (不包括圆轴安装面 Excluding the installation surface of the round shaft type)

- 表中转速是以电机的平均转速为基数除以减速比而算出的数值。实际转速将随负载大小而变化，变化范围2~20%。
- 表中 ■ 色框表示输出轴的旋转方向与电机旋转方向相反。
- 表中转矩是以电机额定转矩×减速比×传动效率计算而得。
- 减速箱的最大容许转矩为 $3\text{N}\cdot\text{M}$ 。
- In the table, the speed is calculated from the base of the motor's average speed divided by the deceleration ratio. The actual speed , will vary with the load,ranging from 2% to 20%.
- The ■ box in the table indicates the rotation direction of the gearbox output shaft is opposite to that of the motor.
- Torque in the table is calculated from motor rated torque * Reduction ratio * transmission efficiency.
- The maximum allowable torque of the gear box is $3\text{N}\cdot\text{M}$.

● 接线图Wiring Diagram

- 旋转方向指从电机轴看来的方向。CW表示顺时针方向，CCW表示逆时针方向。
 - 表中所记型号为齿轮轴型，圆轴型亦同。
 - The direction of motor rotation is viewed from the shaft end of motor.
CW represents the clockwise direction, while CCW represents the counterclockwise direction.
 - Part number indicated in the list is pinion shaft type, also valid for the equivalent round shaft type.

● 注意Note

- 单相电机运转方向的转换应在电机停止后进行。
 - 若在电机运转时转换运转方向，可能发生无法转换运转方向或须费时较久的情况。
 - Change the rotation direction of single-phase motor only after the motor is stopped.
 - If an attempt is made to change the direction of rotation while the motor is running, motor may ignore reversing command or the direction of rotation is reversed with some delay.

● 表中转速是以电机的平均转速为基数除以减速比而算出的数值。实际转速将随负载大小而变化，变化范围2~20%。

● 表中 ■ 色框表示输出轴的旋转方向与电机旋转方向相反。

● 表中转矩是以电机额定转矩×减速比×传动效率计算而得。

● 减速箱的最大容许转矩为10N · m。

● In the table, the speed is calculated from the base of the motors average speed divided by the deceleration ratio. The actual speed, will vary with the load ranging from 2% to 20%.

● The ■ box in the table indicates the rotation direction of the gearbox output shaft is opposite to that of the motor.

● Torque in the table is calculated from motor rated torque *reduction ratio * transmission efficiency.

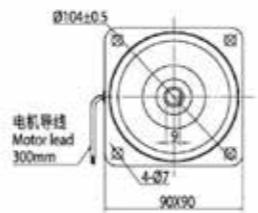

● The maximum allowable torque of the gear box is 8N · m.

● 外形尺寸 (单位mm) Dimension(Unit:mm)

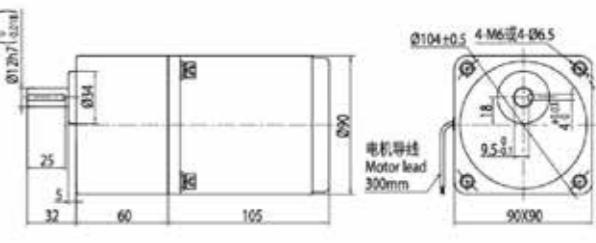

- 圆轴电机
重量 Weight: 2.4kg

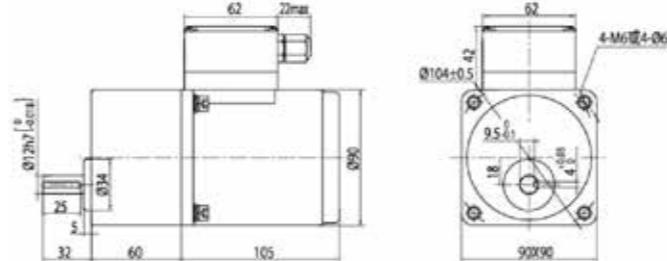

- 组合: 引线型电机+标准减速箱 (减速比1: 3~200)
重量Weight: 3.75kg

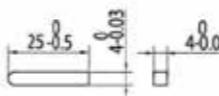

- 组合: 接线盒型电机+标准减速箱 (减速比1: 3~200)
重量Weight: 3.75kg

- 中间齿轮箱 Decimal Gearhead
可安装在齿轮轴型上 Can be connected to GN pinion shaft type
重量Weight: 0.6kg

- 键 (减速器附件)
Key (gearbox accessory)

- 其中速比3~20可以做成短型减速箱，高度为42mm。
Gear ratio 3~20 can be made as short height type (42mm).

● 接线图Wiring Diagram

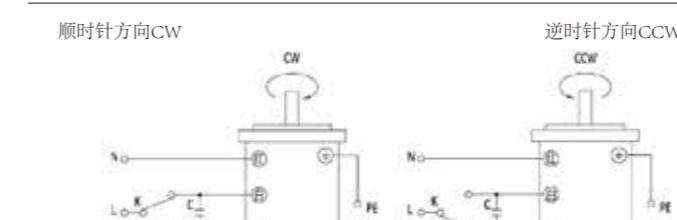

- 运转方向指从电机轴看来的方向。CW表示顺时针方向，CCW表示逆时针方向。

- 表中所记型号为齿轮轴型，圆轴型亦同。

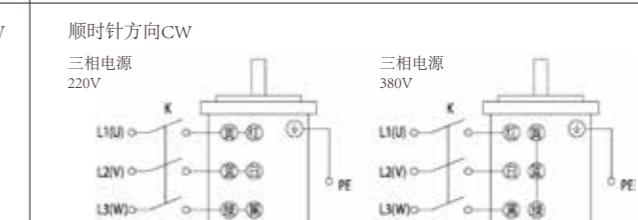

- The direction of motor rotation is viewed from the shaft end of motor.
CW represents the clockwise direction, while CCW represents the counterclockwise direction.

- Part number indicated in the list is pinion shaft type also valid for the equivalent round shaft type.

PAIS90A40GN/PAIS90C40GN

PAIS90S40GN/PAIS90SH40GN

三相电机若对换任意两条电源线顺序，可实现反向运转。
To change the rotation direction change any two connections among.

● 注意Note

- 运转方向指从电机轴看来的方向。CW表示顺时针方向，CCW表示逆时针方向。

- 若在电机运转时转换运转方向，可能发生无法转换运转方向或须费时较久的情况。

- Change the rotation direction of single-phase motor only after the motor is stopped.

- If an attempt is made to change the direction of rotation while the motor is rotating, the motor may ignore reversing command, or the direction of rotation is reversed with some delay.

- 运转方向指从电机轴看来的方向。CW表示顺时针方向, CCW表示逆时针方向。

- 表中所记型号为齿轮轴型, 圆轴型亦同。

- The direction of motor rotation is viewed from the shaft end of motor.
CW represents the clockwise direction, while CCW represents the counterdock wise direction.

- Part number indicated in the list is pinion shaft type also valid for the equivalent round shaft type.

调速减速电机 SPEED CONTROL GEAR MOTORS

200W
104mm

● 电机型号/性能 List of motor characteristics

电机型号 Motor Model		输出功率 Output Power	电压 Voltage	频率 Frequency	电流 Current	额定转速 Rated Speed	额定扭矩 Rated Torque	启动扭矩 Start Torque	运行电容 Capacitor
齿轮轴型 Pinion Shaft	圆轴型 Round Shaft	W	V	Hz	A	90r/min 1200r/min	mN.m	μF/VAC	
PACS104C200GU-F	PACS104A200A-F	200	1ph220	50	1.45	90~1350	500 1450	1000	12.0/450
				60	1.50	90~1550	450 1200	900	
PACS104A200GU-F	PACS104A200A-F	200	1ph110	50	2.90	90~1350	500 1450	1000	35.0/250
				60	3.00	90~1550	450 1200	900	

- 从调速电机转矩/转速曲线可知,虽然调速电机的调速范围为:50Hz...90-1350转/分钟; 60Hz...90-1550转/分钟。但由于低速时(≤ 400 转/分钟),电机转矩下降较多,易发生过载,且电机直连风扇冷却效果差,易发热,因此必须预留足够的功率余量,并且不要经常工作在低速区因此电机最佳调速范围为: 50Hz...900-1350转/分钟; 60Hz...900-1550 转/分钟。
- 各种安全规格以电机铭牌上的型号名取的认证。
- 注: “-A”型号中电压为110v时,配置电容器容量以实际铭牌为准。
- It can be seen from the torque/speed curve of the speed-regulating motor although the speed range of the speed regulating motor is :50Hz... 90-1350 RPM; 60Hz...90-1550 revolutions per minute. But due to the low speed (400 RPM) or less when the motor torque drop more prone to overload and poor motor directly connected the fan cooling effect easy to heat so must set aside enough power margin and dont often work in low spe ed zone. Therefore the optimal speed range of the motor is: 50Hz...900-1350 revolutions per minute; 60Hz...900-1550 RPM.
- When the motor is approved under various safety standards the model name on the nameplate is the approved model name.
- Note: -A means the voltage 110v. The matched capacitor value should be consistent with the nameplate.

力矩减速电机 TORQUE GEAR MOTOR

● 特征 Feature

- 具有垂下特征，可调速范围宽大。
力矩电机由于起动转矩大，具有垂下的特征，因此，能够通过改变电压进行调速。（电机的转矩与电压的平方成正比）
- 适用于卷取作业
以固定的张力连续卷取定速运转的物体时，若卷轴机直径增大至2倍，则电动机的输出转矩亦增大至2倍，而电动机转速则减半。作业时须保持这一比例关系。
- 可作为制动使用
电机在转速-转矩特性的制动领域，可作为制动来使用。此外，也可以通过直流励磁进行固定张力控制。

● The Speed Can Vary Widely, Depending on the Sloping Characteristics.

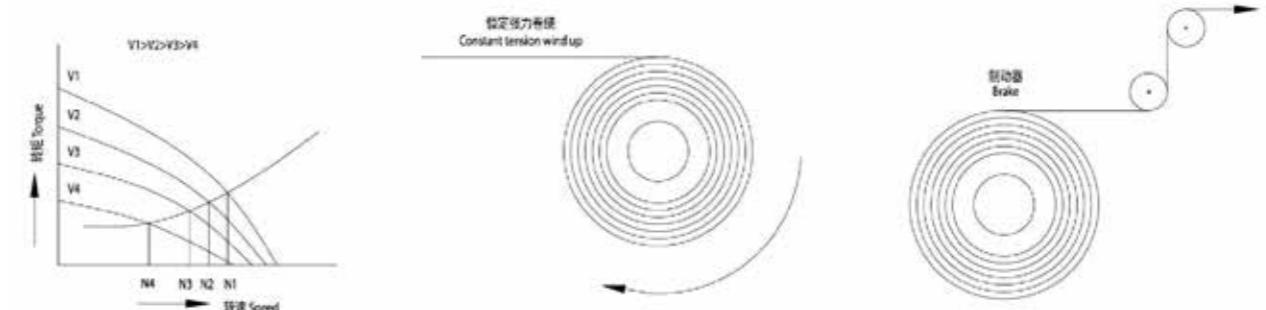

Torque motors have a high starting torque and Torque motors have a high starting torque and sloping characteristics, allowing easy speed control simply by changing the voltage of the power supply. (The motor torque changes approximately proportion to the square of the voltage)

● Suitable For Winding Applications

In an application where an object is released continuously at a constant speed and wound up with constant tension, the torque must be doubled and the speed must be halved if the diameter of the winding spool is doubled.

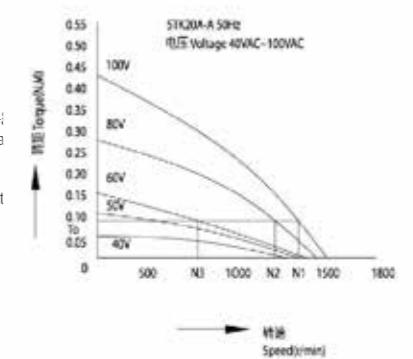

● Use As A Brake

By using the motor in the braking region of the speed-torque characteristics, it can serve as a brake. Constant tension operation can be achieved by applying a DC voltage.

● 转速-转矩特性图的读方法 How To Read Speed-Torque Characteristics

- 转矩电动机的转矩几乎与电变化。通过改变电动机通电电压，就能够得到各电压下分别具有垂下性速-转矩特性曲线。
- 负载转矩时电压调整为100V、80V、60V的话，电动机会分别以N1、N2、N3转速施转期速，通过改变电压，能够很简单地改变转速。
- 使用转矩电动机时，请了解必需的转矩和转速，根据是连续使用还是短时间使用，参照转速转矩特性作出选择。在堵转状态下使用时，选择基准只考虑转矩。
- 用于连续运转等会造成温度上升问题的场合时，可通过选用较大输出功率的产品以调整电压方式控制转速、转矩。
- The motor torque changes approximately proportion to the square of the voltage. When the voltage supplied to the motors is changed, speed-torque curves with a sloping characteristic (torque highest at zero speed and decreases steadily with increasing speed) shift to that of the corresponding voltage.
- When the voltage is changed to 100V, 80V and 60V while the load torque is T_O, the motor rotates at speeds N₁, N₂ and N₃ respectively. Thus, the speed can be changed easily by varying the voltage.
- When choosing a torque motor, first determine the required torque and speed. Then select a motor using the speed-torque characteristics curves to determine whether the motor should be operated under continuous duty or limited duty. When used under locked rotor conditions, only the torque factor is considered.
- The temperature rise of the motor may cause a problem during continuous operation. In this case, choose a motor with an output power large enough for continuous operation and adjust the torque to control the torque and speed.

● 力矩电机电压控制方法 Voltage control of torque motors

电压控制的一般方法是，使用双向可控硅中等的相位控制方式。是一种如图所示，通过改变触发双向可空硅的相位角 α ，使输入电压像斜线部分那样变化的控制方法。

The method most commonly used to control voltage is by phase control using a triac. As shown in Fig.1 by changing the phase angle α at which the triac switches the input voltage is controlled as represented by the phase angle areas of the graph.

● 装有减速器时的输出转矩 Gear motor torque table

由于具有垂下特性，因此，力矩电机可以实现从停止状态到最高转速之间的任一转速。装有减速器中间减速器时的容许转矩，请参照转速转矩特性曲线图，根据所使用的转速和转矩，按照下面的公式算出：

$$\text{减速器输出轴转速 } NG = \text{电机转速} \times 1/\text{减速器减速比}$$

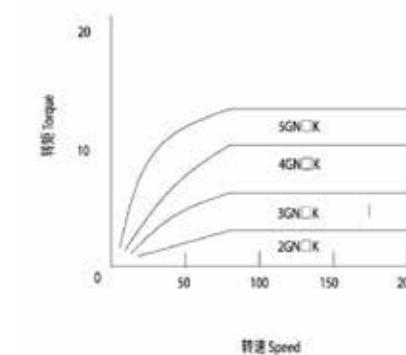

$$\text{减速器输出轴转矩 } TG = \text{电机转矩} \times \text{减速器减速比} \times \text{减速器传动效率}$$

Due to the sloping characteristics, torque motors can be operated over a wide speed range from locked rotor condition to the maximum speed. The permissible torque when a gearhead and a decimal gearhead are directly connected can be calculated according to the following formula using the speed and torque determined from the speed-torque characteristics

Peed of gearhead output shaft $NG = \text{Motor speed} \times 1/\text{gearhead gear ratio}$
Output torque of gearhead $TG = \text{Motor torque} \times \text{gearhead gear ratio} \times \text{gearhead efficiency}$

● 请注意，减速器的输出轴转矩不可大于减速器的最大容许转矩

Please note, the output torque of the gearhead must be lower than the maximum permissible torque

减速器型号 Gearhead Model	减速器速比 Gearhead Gear Ratio	减速器传动效率 Gearhead Efficiency
2GN□K	3-18	81%
3GN□K	25-36	73%
4GN□K	50-200	66%
5GN□K		

- 减速器、中间减速器另售。
- 减速器型号的口中为减速比的数值。
- Gearheads and decimal gearheads are sold separately.
- Enter the gear ratio in the box (□) within the model name.

- 由于力矩电机设计工作在力矩模式，因此电机工作效率低，若电机连续工作在较高电压下，电机温升较高，甚至触发内部热保护器，造成电机无法正常运转。设计、造型、使用时请注意。
- 力矩电机内部装有自动复位型热保护器，若电机运转过热，热保护器将切断电机电源，电机将停止运转；当电机温度下降后，热保护器将自动复位供电，电机重新运转。故在进行操作检查时，必须先切断电源，防止发生事故。
- 自动复位型热保护，动作温度：120°C-125°C，复位温度：80-85°C。
- Since the torque motor is designed to work in torque mode the efficiency of the motor is not very high. If the motor is continuously operated at a higher voltage the temperature rise of the motor is higher and even the internal thermal protector is triggered. Cause the motor can not run normally. Please pay attention when designing modeling and using.
- The torque motor is equipped with an automatic reset type thermal protector. If the motor runs too hot the thermal protector will cut off the motor power and the motor will stop. When the temperature of the motor drops the thermal protector will automatically reset the power supply and the motor will run again. Therefore when performing operation inspection the power supply must be cut off to prevent accidents.
- Automatic reset type thermal protection operating temperature: 120°C-125°C, reset temperature: 80-85°C.

- 由于力矩电机设计工作在力矩模式，因此电机工作效率低，若电机连续工作在较高电压下，电机温升较高，甚至触发内部热保护器，造成电机无法正常运转。设计、造型、使用时请注意。
- 力矩电机内部装有自动复位型热保护器，若电机运转过热，热保护器将切断电机电源，电机将停止运转；当电机温度下降后，热保护器将自动复位供电，电机重新运转。故在进行操作检查时，必须先切断电源，防止发生事故。
- 自动复位型热保护，动作温度：120°C-125°C，复位温度：80-85°C。
- Since the torque motor is designed to work in torque mode the efficiency of the motor is not very high. If the motor is continuously operated at a higher voltage the temperature rise of the motor is higher and even the internal thermal protector is triggered. Cause the motor can not run normally. Please pay attention when designing modeling and using.
- The torque motor is equipped with an automatic reset type thermal protector. If the motor runs too hot the thermal protector will cut off the motor power and the motor will stop. When the temperature of the motor drops the thermal protector will automatically reset the power supply and the motor will run again. Therefore when performing operation inspection the power supply must be cut off to prevent accidents.
- Automatic reset type thermal protection operating temperature: 120°C-125°C reset temperature: 80-85°C.

- 表中转速是以电机的平均转速 (50Hz: 750r/min, 60Hz: 900r/min) 为基数除以减速比而算出的数值。实际转速将随负载大小而变化，变化范围2~20%。

- 表中■色框表示输出轴的旋转方向与电机旋转方向相反。

- 表中转矩是以电机额定转矩×减速比×传动效率计算而得。

- 减速箱的最大容许转矩为3NM。

In the table the speed is calculated from the base of the motors average speed (50Hz: 750r/min, 60Hz: 900r/min) divided by the deceleration ratio. The actual speed will vary with the load ranging from 2% to 20%.

The box in the table indicates that the rotation direction of the output axis is opposite to that of the motor.

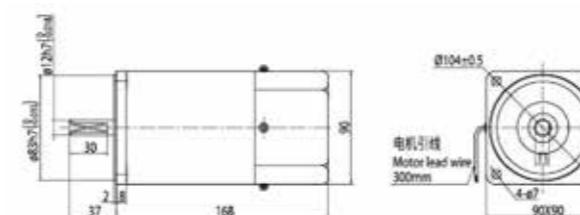

Table transfer torque is calculated from motor rated torque * reduction ratio * transmission efficiency.

The maximum allowable torque of the decelerator is 3NM.

● 表中转速是以电机的平均转速(50Hz:1350r/min,60Hz:1550r/min)为基数除以减速比而算出的数值。实际转速将随负载大小而变化,变化范围2~20%。

● 表中 ■ 色框表示输出轴的旋转方向与电机旋转方向相反。

● 表中转矩是以电机额定转矩×减速比×传动效率计算而得。

● 减速箱的最大容许转矩为20N·M。

● In the table, the speed is calculated from the base of the motor's average speed (50Hz:1350r/min,60Hz:1550r/min) divided by the deceleration ratio. The actual speed will vary with the load ranging from 2% to 20%.

● The ■ box in the table indicates the rotation direction of the gearbox output shaft is opposite to that of the motor.

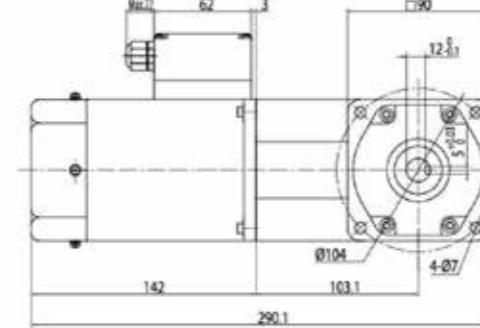

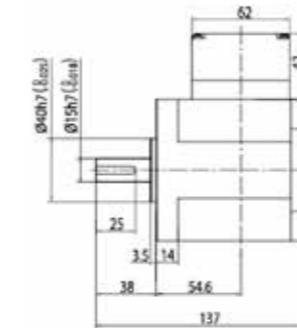

● Torque in the table is calculated from motor rated torque * reduction ratio * transmission efficiency.

● The maximum allowable torque of the gear box is 20N·M.

● 外形尺寸(单位mm) Dimension (unit: mm)

SF系列面板式调速器

SK SERIES PANEL DRIVE

特点 Characteristics

- 采用MCU数字控制技术,功能丰富,性能优异。
- 采用数显菜单式选项,修改设定方便快捷。
- 可根据用户显示需要设定显示倍率,自动换算显示目标值。
- 可实现缓慢加速、缓慢减速、快速停止、4段速等复杂运动控制。
- 可外接开关控制、0~10V 模拟量控制。
- 模拟量控制可自动匹配最高转速,调节控制方便、安全。
- 内置运行电容。
- 堵转保护功能,防止电机、调速器因堵转烧坏。
(此功能可保护堵转过载,但无法保护非堵转过载)

- With MCU digital control technology it has rich functions and excellent performance.
- Easy to change settings with digital menu options.
- The display magnification can be set according to the users requirement and the display target value can be automatically converted.
- Realize complex motion control such as slow acceleration, slow deceleration fast stop and 4-speed.
- External switch control 0~10V analog control.
- The analog control can automatically match the maximum speed, and the control is convenient and safe.
- The stall protection function prevents the motor and drive from being burnt out due to blockage.(This function can protect the blocked overload, but cannot protect the non-blocked overload)

SF系列面板式驱动器接线图 SF series panel governor diagram

操作面板按钮控制电机运转

1) 无需安装K1、K2开关。

2) 菜单设置: 运转控制方式F-03选择“1”或“4”操作面板按钮控制。

调速电机的功率必须与调速器适用电机功率一致。

电源电压必须与调速器电源电压规格一致。OF为断路器, 在发生短路时保护调速器和调速电机。

Operator panel buttons control motor operation

1) no need to install the K1 and K2 switches.

2) Menu Settings: Operation control mode F-03 select "1" or "4" operator panel button control.

The power of the adjustable speed motor must be the same as motor power of the drive.

The power supply voltage must match the drive supply voltage specifications. OF is a circuit breaker that protects the drive and the speed control motor in the event of a short circuit.

外接开关K1、K2控制电机运转

1) 必须安装K1、K2开关。

2) 菜单设置: 运转控制方式F-03选择“2”或“3”外接开关控制。

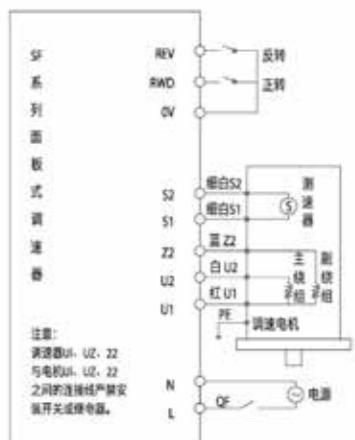

请注意核对调速器型号标签功率是否与电机功率一致。

External switches K1, K2 control motor operation

1) install the K1 and K2 switches

2) Menu Settings: Operation control mode F-03 select "2" or "3" external switch control.

Please check that the drive model label power is consistent with the motor power.

QF断路器电流规格表 QF breaker current specification table

电源电压 Voltage	电机功率 Power	QF电流规格 QF current specification
220V	6~90W	1A
220V	120~200W	2A
110V	6~90W	2A
110V	120~200W	4A

电源电压必须与调速器电源电压规格一致。QF为断路器在发生短路时保护调速器和调速电机。

The power voltage must match the speed controller's voltage specifications.

QF is the circuit breaker which protect the speed controller and motor when a short circuit occurs.

运行电容C规格表 Operating capacitor C specification sheet

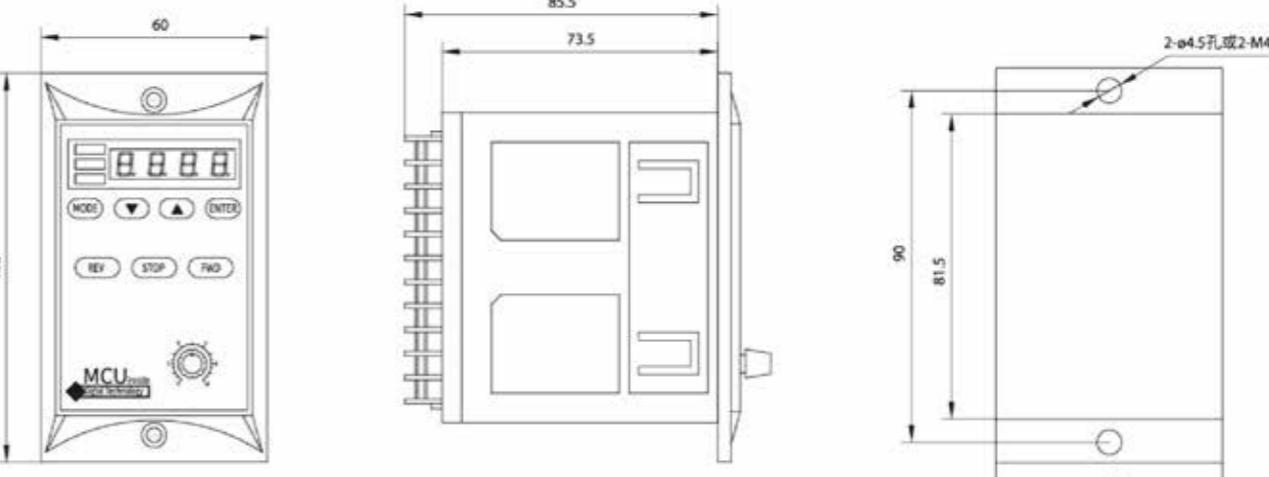

电源电压 Voltage	电机功率 Power	220V	110V
6W	0.7μF/500V	2.5μF/250V	
15W	1μF/500V	4μF/250V	
25W	1.5μF/500V	6μF/250V

● 使用须知Terms and Conditions

- 请勿在爆炸性环境、易燃性气体环境、腐蚀性环境以及容易沾上水的场所或可烘物周围使用。
- 避免连续振动,过度冲击。
- 电机在正常运转状态下,有时电机外壳表面的温度可能会超过70°C,因此在可能触及电机的使用环境下请加贴右圈所示的警告标志。
- 请务必接好地端子接地。
- 安装、连接、检查等作业须由专业技术人员进行。
- Do not use in a fragile environment an easy-to-existing gas environment, a corrosive environment or a place where it is easy to get water or a bakeable object.
- Avoid continuous vibration.Excessive impact.
- When the motor is in normal operation sometimes the temperature of the motor casing surface may exceed 70° C. Therefore, please put the general sign shown on the right cradle in the environment where the motor may be touched.
- Be sure to ground the ground terminal.
- Installation connection inspection, etc. must be carried out by professional technicians.

安装方式 Install method	面板式 Panel type			内置式 Built-in
电源电压 Voltage	单相single phase 220V			单相Single phase 220V
电源频率 Power frequency	50/60HZ			
适用电机类型 Motor type	YT系列调速电机 YT Series speed motor			
运行电容 Capacitor	内置式(内置于调速器内) Built-in			外置(放置于调速电机包装内,需用户自行连接) External (placed in the speed motor package, users need to connect it)
运动控制功能 Motion control function	面板或外接开关运转控制, 调速, 缓慢加速, 缓慢减速 Panel or external switch operation control speed control Slow acceleration slow deceleration			外接开关运转控制, 调速, 缓慢加速, 缓慢减速, 快速停止, 4段速 External switch operation control, speed control, Slow acceleration, slow deceleration fast stop 4 speed stage
速度调节方式 Speed adjustment method	面板 “▲” “▼” 键; panel key面板旋钮panel knob; 0~10v 模拟量 Analog quantity			
调速范围 Speed range	90-3000r/min。(用户可根据电机极数、电源频率、使用需要设定) Users can set according to the number of motor poles, power frequency, and usage requirements			
适用环境 Applicable environment	环境温度Ambient temperature: -10° C ~ +45C (无结冰No icing) 环境湿度Ambient humidity: 85%以下(无结露) No condensation			

SF系列面板式驱动器接线图 SF series panel governor diagram

操作面板按钮控制电机运转

- 无需安装K1、K2开关。
- 菜单设置: 运转控制方式F-03选择“1”或“4”操作面板按钮控制。调速电机的功率必须与调速器适用电机功率一致。电源电压必须与调速器电源电压规格一致。OF为断路器, 在发生短路时保护调速器和调速电机。Operator panel buttons control motor operation
1) no need to install the K1 and K2 switches.
2) Menu Settings: Operation control mode F-03 select "1" or "4" operator panel button control.
The power of the adjustable speed motor must be the same as motor power of the drive.
The power supply voltage must match the drive supply voltage specifications. OF is a circuit breaker that protects the drive and the speed control motor in the event of a short circuit.

外接开关K1、K2控制电机运转

- 必须安装K1、K2开关。
- 菜单设置: 运转控制方式F-03选择“2”或“3”外接开关控制。请注意核对调速器型号标签功率是否与电机功率一致。External switches K1, K2 control motor operation
1) install the K1 and K2 switches
2) Menu Settings: Operation control mode F-03 select "2" or "3" external switch control.
Please check that the drive model label power is consistent with the motor power.

QF断路器电流规格表 QF breaker current specification table

电源电压 Voltage	电机功率 Power	QF电流规格 QF current specification
220V	6~90W	1A
220V	120~200W	2A
110V	6~90W	2A
110V	120~200W	4A

电源电压必须与调速器电源电压规格一致。 QF为断路器在发生短路时保护调速器和调速电机。The power voltage must match the speed controllers voltage specifications. QF is the circuit breaker which protect the speed controller and motor when a short circuit occurs.

运行电容C规格表 Operating capacitor C specification sheet

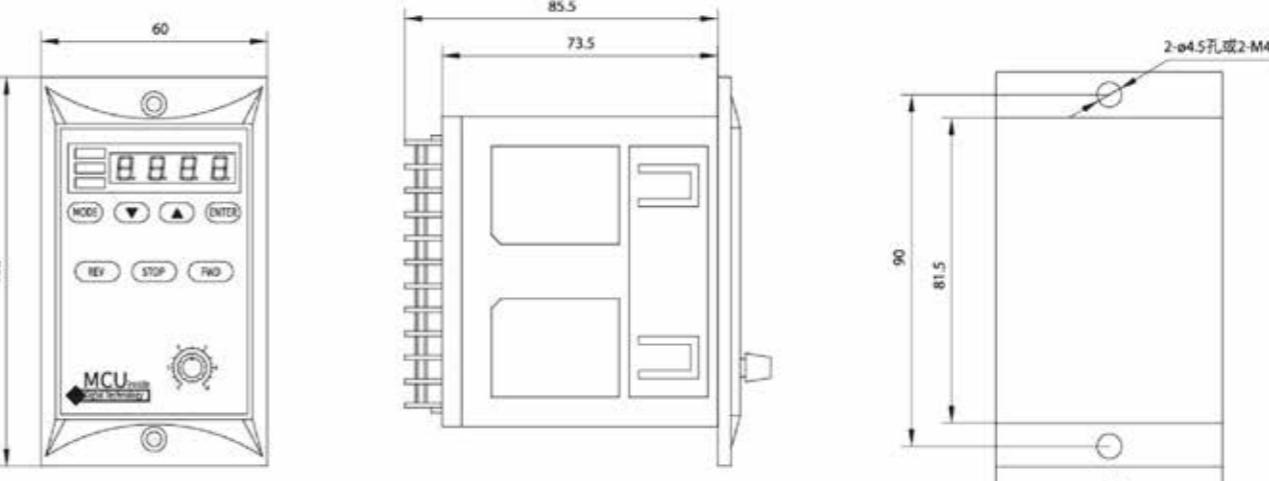

电源电压 Voltage	220V	110V
电机功率 Power		
6W	0.7μF/500V	2.5μF/250V
15W	1μF/500V	4μF/250V
25W	1.5μF/500V	6μF/250V
40W	2.5μF/500V	10μF/250V
60W	3μF/500V	14μF/250V
90W	5μF/500V	20μF/250V
120W	6μF/500V	24μF/250V
200W	10μF/500V	40μF/250V

注:运行电容按电机型号配, 放置于调速电机包装内。

Note: The running capacitor is matched to the motor model and placed in the motor package.

● 使用须知 Terms and Conditions

- 请勿在爆炸性环境、易燃性气体环境、腐蚀性环境以及容易沾上水的场所或可烘物周围使用。
- 避免连续振动,过度冲击。
- 电机在正常运转状态下,有时电机外壳表面的温度可能会超过70°C,因此在可能触及电机的使用环境下请加贴右圈所示的警告标志。
- 请务必接好地端子接地。
- 安装、连接、检查等作业须由专业技术人员进行。
- Do not use in a fragile environment, an easy-to-existing gas environment a corrosive environment or a place where it is easy to get water or a bakeable object.
- Avoid continuous vibration.Excessive impact.
- When the motor is in normal operation, sometimes the temperature of the motor casing surface may exceed 70° C. Therefore please put the general sign shown on the right cradle in the environment where the motor may be touched.
- Be sure to ground the ground terminal.
- Installation connection inspection etc. must be carried out by professional technicians.

名词解释

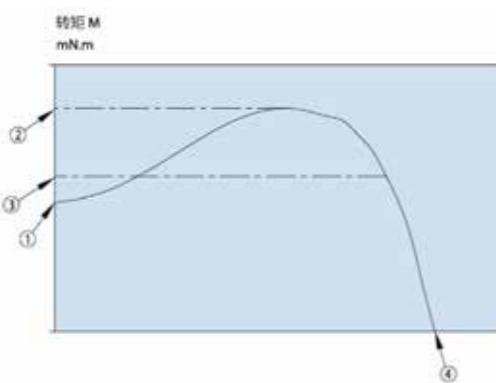

GLOSSARY

● 电机motor

- 启动转矩。电机启动瞬间产生的转矩,通常、单相电机启动转矩为额定转矩60~70%,三相电机启动转矩为额定转矩2~3倍。
- 额定转矩。电机在额定电压、额定频率下可连续输出的转矩。
- 额定转速。电机在额定电压、额定频率、额定输出功率下的转速。
- 空载转速。电机在额定电压、额定频率、无负载下的转速。
- 停止过转量。电机转子轴从切断电源的瞬间到完全停止时,因惯性继续旋转的圈数。
- 制动力。为使电机输出轴快速减速、停止制动、或使电机输出轴保持原状态所施加于电机转子轴的力。电磁制动电机的制动力等于额定转矩。电机的制动力约等于10%的额定转矩。
- 齿轮轴。电机转子轴形状为齿轮状,用于配套、连接减速箱用。
- 圆轴。电机转子轴形状为圆柱状,用于电机单独使用,无法配接减速箱。
- Starting torque. The torque generated at the moment of starting the motor usually the single-phase motor starting torque is 60~70% of the rated torque and 2 to 3 times the rated torque of the three-phase motor.
- Rated torque. The torque that the motor can output continuously at rated voltage and frequency.
- Rated speed. The speed of the motor at rated voltage frequency and output power.

- No-load speed. The speed of the motor at rated voltage frequency and no-load.
- Stop overturning. The number of turns of the motor rotor shaft that continues to rotate due to inertia from the moment the power is turned off to when it completely stops.
- Braking force for making the output shaft of the motor rapid deceleration stop braking or keep the motor output shaft in its original state as the force that apply to the motor rotor shaft. The braking force of the electromagnetic brake motor is equal to the rated torque. The braking force of the motor is approximately equal to 10% of the rated torque.
- Gear shaft. The shape of the rotor shaft of the motor is gear-shaped which is used for supporting and connecting the gear box.
- Round shaft. The motor uses a cylindrical rotor shaft alone. It cannot be equipped with a gearbox.

● 电机转矩-转速曲线Motor torque-speed curve

图中:

- ①启动转矩
- ②最大转矩
- ③额定转矩
- ④空载转矩

● 减速箱gearbox

- 容许转矩。电机经减速箱减速,电机端输出转矩比减速箱放大减速比的倍数,当减速比较大时,如1:180,电机输出转矩放大180倍后,若此时减速箱负载很大时,理论上电机可以驱动负载,但由于减速箱机械强度无法承受此负载,减速箱将损坏,保证减速箱不损坏的最大负载转矩,即为减速箱容许转矩。
- 格雷森弧齿轮。该齿轮为90度传动,具有传动效率高,无自锁,寿命长,主要用于汽车后桥传动,为最先进的90度传动结构。
- Allowable torque. The motor is decelerated by the gearbox and the output torque of the motor end is a multiple of the reduction ratio of the gearbox. In theory the motor is able to drive the load but as the mechanical strength of the gearbox cannot withstand this load the gearbox will be damaged. So the gearbox allowable torque means the maximum load torque that ensure the gearbox not damaged.
- Grayson arc gear. The transmission degree of this gear is 90-degree its with high transmission efficiency no self-locking and long service life. It is mainly used for automobile rear axle transmission also its the most advanced 90 degree transmission structure.

常见机械设计安装问题

COMMON MECHANICAL DESIGN INSTALLATION PROBLEMS

● 我司6~200W微型系列产品与其他品牌在尺寸、外观互换的区别点如下,其他安装尺寸均相同可互换。

The difference between the size and appearance of our 6~200W micro series products and other brands is as follows. Other installation dimensions are the same and interchangeable.

区别点Difference point	砾峰机电·PRIMOPAL	其他品牌Other brands	解决方法Solution
标准减速箱安装孔形式 Standard gearbox mounting hole form	标配为螺纹孔 优点:①安装方便;②强度等级高,螺纹不易损坏 Standard threaded hole Advantages: ①easy to install, ②high strength level, the thread is not easy to damage.	通孔 Through hole	定制通孔型 Customized through hole type
接线盒 Terminal box	标配带接线盒 优点:①IP54防护,符合安规标准②美观、接线方便 Standard with terminal box Advantages: ①IP54 protection, in compliance with safety standards ②beautiful, convenient wiring.	引线式 Leaded	定制引线式 Custom lead type

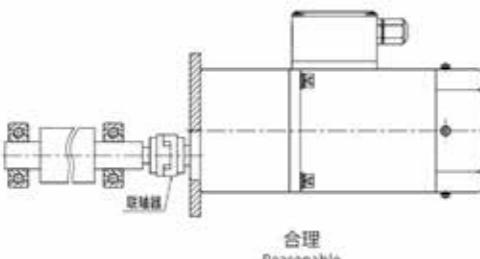

● 6~200W微型电机与减速箱安装 The installation of 6~200w micro motor and gearbox

任意旋转电机或减速箱、请勿碰伤电机齿轮轴,勿损坏O形密封圈,法兰上的四个螺钉对角依次紧固,确保电机与减速器箱体紧密结合,防止漏油,防止电机噪音。

Please don't damage the motor gear shaft or O style seal ring of any rotating motor or gearbox.

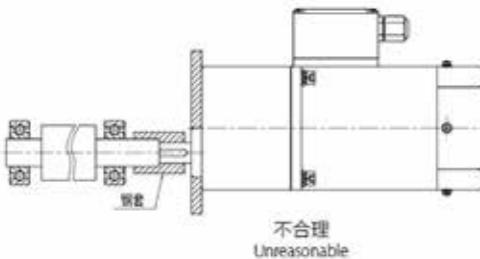

Ensure that the motor and reducer box are tightly combined to prevent oil leakage and motor noise.

● 负载轴与电机轴出轴的联接方式 Connection type of load shaft and motor output shaft

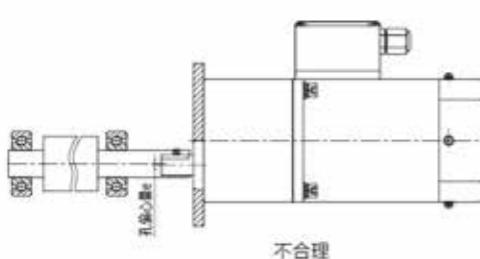

采用联轴器连接可补偿负载轴与电机输出轴之间的同心度与角度偏差,防止过定位,确保电机正常工作。

Coupling connection can compensate for the concentricity and angular deviation between the load shaft and the motor output shaft to prevent over determination to ensure the normal operation of the motor.

采用钢套连接无法补偿负载轴与电机输出轴之间的同心度与角度偏差,导致负载变大,严重时电机输出轴折断。

The steel sleeve connection cannot compensate for the concentricity and angular deviation between the load shaft and the motor output shaft resulting in a large load. In severe cases the motor output shaft is broken.

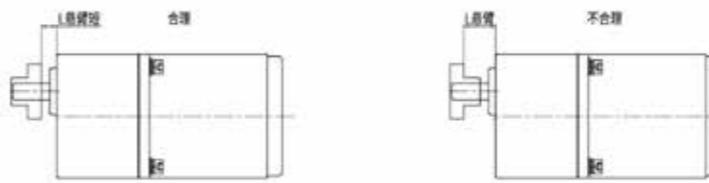

采用负载轴中心钻孔/镗孔难以达到较高的同心度,存在偏心量e,当螺钉锁紧后,输出轴将过定位,导致负载变大,严重时电机输出轴折断。

It is difficult to achieve high concentricity by using the center hole/boring of the load shaft. There is an eccentricity e. When the screw is locked tightly the output shaft will be over positioned resulting in a large load. In severe cases the output shaft of the motor is broken.

● 链轮安装方式 sprocket installation

(链轮直径尽可能大,以减少径向载荷。The sprocket diameter is as large as possible to reduce radial load)

● 选用大速比(1:50)以上减速器或加装中间减速器时注意事项

Precautions when using a gearbox with a large ratio (1:50) or more or installing an intermediate reducer

● 我司6~200W 多功能减速电机,是按国际标准尺寸设计,该系列减速电机由于大减速比(1:50)以上与小减速比减速箱均共用同一尺寸减速箱,其设计应用场合为:仅需要低转速.不需要减速器、电机全功率输出。
因此,当选用大减速比(1:50)以上减速箱或加装中间减速箱时,减速箱最大容许转矩将小于电机额定输出转矩x减速比乘积值,若减速箱输出轴卡死或严重过载,减速箱将损坏,请设计选用时特别注意。

- 特别是三相电机过载能力强,其起动转矩可达额定转矩的3倍,若减速箱输出轴有卡死或严重过载的可能,请选用起动转矩小于额定转矩的单相电机。
- 90机座号系列电机,有40W、60W小功率电机可选,因此90机座选用大减速比(1:50)以上减速箱或加装中间减速箱时,若减速箱输出轴有卡死或严重过载的可能,请选用40W、60W功率小的电机,勿选用90W、20W功率大的电机。
若设计中无法避免减速箱输出轴:卡死或严重过载,应安装转矩限制装置过载打滑或在容易更换维修的位置安装安全销损坏后方便维修。
- Our 6~200W multifunctional geared motor is designed according to international standard size. Due to the geared motor of the large reduction gear ratio (1:50) and small reduction gear ratio are used the same size of gearbox, the application of the design is: only low speed is required.
No need for gear unit or motor full power output.

Therefore, when a gearbox with a large reduction ratio (1:50) or more or an immediate gearbox is installed, the value of the maximum allowable torque of the gearbox will be less than the value of the motor rated output torque x reduction ratio product value, if the output shaft of the gearbox is stuck or seriously overloaded, the gearbox will be damaged, please pay special attention when designing.

- Especially the three phase motor has strong overload capability and its starting torque can reach 3 times of the rated torque. If the output shaft of the gearbox is stuck or severely overloaded, please select a single-phase motor with a starting torque less than a rated torque.
- 90 frame size series motor 40W, 60W low power motor is optional. Therefore when the 90 base is selected with a gear above a large reduction ratio (1:50) or an intermediate gear box is installed and the output shaft of the reduction gear box is stuck or severely overrun, please choose a motor with a small power of 40W and 60W, and do not use a motor with a large power of 90W and 20W.

If the output shaft of the gearbox cannot be avoided in the design: when it is stuck or severely overloaded the torque should be installed to limit the overload and the slip of the device or the safety pin should be stalled in the location where it is easy to replace and repair so as to be maintained easily at a position that is easy to replace and repair.

● 设计举例 Design example

● 客户原设计

选用:电磁制动电机5IK90GU-S3MF+5GU120RT

电磁制动电机的输出转矩经减速箱减速将被放大120倍,90机座减速箱最大容许转矩为40N.m,电机输出转矩放大120倍,并过载3倍的转矩为:0.7N.mx120x3 = 252Nm,远远超过最大容许转矩40N·m,因此,若减速箱输出轴卡死或严重过载,减速箱将损坏。

● 优化设计

应减小电机功率,电机功率选用90机座号40W电机,同时不要用过载能力特强的三相电机,改用起动转矩小于额定转矩的单相电机5IK90GU-CMF按此配置最大输出转矩为: 0.3Nm x 120 = 36Nm, 小于最大容许转矩40N.m,满足要求。

● 客户新设计

改用:电磁制动电机5IK90GU-CP+5GU120RT,既可满足要求又节约成本。

● Customer original design

Optional: electromagnetic brake motor 5IK90GU-S3MF+5GU120RT

The output torque of the electromagnetic brake motor will be amplified by 120 times through the reduction of the reduction gearbox. The maximum allowable torque of the 90-frame reduction gearbox is 40N.m. The output torque of the motor is amplified by 120 times and the overload torque is 3 times: 0.7 N.m x 120 x 3 = 252Nm It far exceeds the maximum allowable torque of 40N·m. Therefore, if the gearbox output shaft is stuck or severely overloaded, the gearbox will be damaged.

● Optimized design

The motor power should be reduced. The motor power should be selected from the 90-frame size 40W motor. At the same time please do not use a three-phase motor with particularly strong overload capacity. Instead a single-phase motor with a starting torque less than the rated torque. 5IK90GU-CMF The large output torque is: $0.3Nmx120=36Nm$, which is less than the maximum allowable torque of 40N.m which meets the requirements.

● Customers new design

Instead: electromagnetic brake motor 5IK90GU-CF+5GU12ORT which can meet the requirements and save costs.

● 直角中空减速箱应用优点 Application advantages of right-angle hollow gearbox

采用直角中空减速箱，无需链轮、链条、链条防护罩，同时可节省一端轴承座，简化设计、降低成本同时还可减少轴向尺寸，节省安装空间。With a right-angle hollow gearbox there is no need for sprockets chains, and chain guards. At the same time it can save one end bearing seat simplify the design reduce costs and also reduce the axial size and save installation space.

● 直角中空电机安装法兰面与负载轴不垂直 Right angle hollow motor mounting flange surface is not perpendicular to load shaft

● 现象：电机无力或憋死，运转时振动、摆动明显，严重时造成电机输出轴断。

● 原因：电机安装法兰面与负载轴不垂直，电机锁紧后，强拉扭曲过定位。

● 故障诊断与排除：

- 1) 电机锁紧螺钉稍微拧松时，输出力矩、振动和摆动有改善，便可以初步确定是此原因。
- 2) 松开安装螺钉，观察电机安装面与设备安装面的四周间隙是否相等、平行，若相差较大即可初步判断此原因，也可进一步拆下电机，将百分表架在负载轴上，负载轴转一周打安装法兰面的跳动，若跳动值大于0.1mm便可最终确定此原因。
- 3) 修正电机安装法兰面与输出轴的垂直度，直至故障排除。

● Phenomenon: The motor is dead or weak, vibration or strongly swing during operation. In severe cases the output shaft of the motor is broken.

● Reason: The motor mounting flange surface is not perpendicular to the load shaft. When the motor is locked it is strongly pulled over positioned.

● Trouble diagnosing and troubleshooting:

- 1) When the motor lock screw is loosened slightly the output torque vibration and oscillation are improved, which can be initially confirmed the reason.
- 2) Loosen the mounting screws and observe whether the gap between the motor mounting surface and the mounting surface of the equipment is equal parallel. If there is too much difference the cause can be judged. The motor can be further removed place the dial indicator on the load shaft. Load shaft rotation-the beating of the mounting flange surface if the beating number is greater than 0.1mm then the problem can be finally determined.
- 3) Correct the verticality of the motor mounting flange surface and the output shaft until the fault is eliminated.

● 减速箱齿轮崩齿 Gearbox's gear collapse

● 齿轮受力分析 齿轮箱崩齿从理论上讲，是由于齿轮所承受负载超过齿轮抗弯强度，导致齿断。齿轮所承受的负载由静负载和冲击负载组成，静负载-般为负载转矩，冲击负载-般为零件惯量加减速产生的冲击力。

● 实例说明：铁锤钉钉子

我们手拿铁锤打钉子至木头，我们先用静负载力打钉子，静力为锤子重量和手可施加的压力，可想而知，这钉子是钉不进木头的。这时候我们用冲击负载力来打钉子，钉子即可轻松钉入木头，由此例子，我们可以知道冲击力是很大的，那冲击力是怎么来的呢？当锤头接近钉子时，其速度为 v_1 ，当接触钉子瞬间，其速度迅速降为 v_2 ，由于 V_1 远大于 V_2 ，因此产生了很大的加速度 a ，根据牛顿定律，冲击力 $F = ma$, m 为锤头质量，锤头质量越大，冲击力越大，同尺寸的锤子，采用比重大的材料制造，其质量就大，因此同尺寸锤头，铁锤比铝锤有力。因为铁比铝比重大。

● 解决措施

1. 静负载由于为负载转矩，较难优化。
2. 动负载为冲击力，参考铁锤钉钉子实例说明，根据 $F=ma$ ，我们可以采用以下办法优化，减小冲击力，防止齿轮崩齿。

1) 零件采用轻材料代替重材料，减小 m 。

2) 减少零件尺寸，优化形状，减少转矩惯量。

3) 采用变频器控制电机启动，停止加减速时间，减小 a ，实现缓加速缓减速。

● Gear force analyse is Gearboxs gear collapse is theoretically due to the fact that the load on the gear exceeds the bending strength of the gear, resulting in tooth breakage. The load on the gear is composed of static load and impact load. The static load is generally the load torque. The impact load is generally the impact force generated by the acceleration and deceleration of the part inertia.

● Example Description: Hammer nails

We hit the nail with a hammer and make it enter the wood. Firstly, we hit the nail with a static load. The static force is the weight of the hammer and the pressure that can be applied by the hand. It is conceivable that the nail cannot be nailed into the wood. When we use the impact load force to hit the nail, the nail can be easily nailed into the wood. By this example it explains that the impact force is powerful. When the hammer is close to the nail its speed is v_1 . The speed drops rapidly to V_2 . Because the value of V_1 is much larger than V_2 a large acceleration A is generated. According to Newtons law, the impact force $F = ma$ m is the mass of the hammer. The greater the mass of the hammer the greater the impact force. Different hammers of the same size the one made of iron is more powerful than the one which is made of aluminum because iron has bigger proportion than aluminum.

● Solutions

1. Static load is difficult to optimize due to load torque.
 2. The dynamic load is the impact force, referring to the example of the hammer and nail according to $F=ma$ we can use the following methods to do some optimize reduce the impact force and prevent the gear from collapsing.
- 1) Instead of heavy materials parts are made of light materials to reduce m .
 - 2) Reduce the size of parts and optimize its shape to reduce torque inertia.
 - 3) Start the motor with inverter stop the acceleration and deceleration time reduce a and realize slowly acceleration and slowly deceleration.

● 电磁制动电机刹车片磨损大，寿命短 Electromagnetic brake motor brake pads have large damage and short life

1. 电磁制动电机采用继电器或接触器直接控制启动、停止，当电机停止时，电机因刹车片刹车迅速由高速降至停止，若电机频繁启停，刹车片将很快磨损，就好比汽车，在100km/h急刹车，不断反复。

2. 若采用三相电磁制动电机配我司变频器控制，变频器具有在电机停止时，先将电机由高速降为低速直至接近停止状态，此时刹车片才抱闸，因此刹车片磨损小、寿命长，就好比汽车在100km/h高速先减速不断降档至低速时才踩刹车。

3. 当然这样的控制方法，电机停止时间会延长，但只要我们提前停止，即可改善停止时间，又避免刹车片磨损。

1. The electromagnetic brake motor adopts relay or contactor to directly control the start and stop. When the motor stops the motor will quickly drop and stop due to the brake pad. If the motor starts and stops frequently the brake pad will wear out quickly just like a car repetitively brake at 100km/ h repeated.

2. If a three phase electromagnetic brake motor is used with our inverter control the inverter has to reduce the motor from high speed to low speed until the motor stops. The brake pads have low wear and long life just like a car driving on a highway at a speed of 100km/h decelerating first and then depressing he brake when downshifting to a low speed.

3. This control method will prolong the stopping time of the motor but as long as we stop in advance we can improve the stopping time and avoid brake pad wear.

常见电气控制技术问题

Common electrical control technology issues

● 单相电机与三相电机特点对比 Specific comparison between single-phase motors and three-phase motors

电机类型 Motor type	电源要求 Power requirement	温升 Temperature rise	振动 Vibration	起动转矩 Starting torque	低速转矩性能 Low speed torque performance	调速方法 Speed control method	调速成本 Speed control cost	频繁正、反转 Frequent positive and negative
单相电机 single phase motor	单相 single phase	一般 general	一般 general	0.6~0.7倍 0.6~0.7 times	一般 general	调速器 drive	低 low	可以 ok
三相电机 three phase motor	三相 three phase	低 low	小 little	2~3倍 2~3times	好 good	变频器 frequency converter	高 high	可以 ok

● 单相电机所配的运行电容可否加大或减小 Can the operating capacitance of a single-phase motor be increased or decreased

单相电机所配的运行电容的容量是经过精确计算,兼顾电机各种特性配备的最佳容量,加大电容容量可增大起动转矩,起动更有劲,但同时电机温升会升高、效率下降,反之则相反。

The capacity of the running capacitor of the single phase motor is accurately calculated taking into account the optimal capacity of the various characteristics of the motor. Increasing the capacity of the capacitor can increase the starting torque, and the starting is more powerful but at the same time the temperature rise of the motor will increase and efficiency declines vice versa.

● 单相电机开关从正转切换至反转,但电机仍正转没反转

The single-phase motor switches from forward to reverse, but the motor still rotates forward without inversion.

单相电机从正转切换至反转过程中,若电机负载惯量较大,此时正反转切换易失败,须待电机减速一定时间后切换才会成功。

阻尼电机是在单相电机基础上加装阻尼装置,可使电机减速时间变短,实现快速正反转切换。

When the single-phase motor is switched from forward rotation to reverse rotation if the load inertia of the motor is large the forward and reverse switching will be easy to fail at this time and the switch will be successful after the motor decelerates for a certain time.

Damping motor is equipped with a damping device on the basis of single-phase motor which can shorten the time of motor deceleration and realize fast forward and reverse switching.

● 单相电机可否用变频器调速 Can single-phase motor use frequency converter speed regulation

不可以,必须使用调速电机并配套调速器调速。

No you must use a speed-regulated motor and a speed governor.

● 1台调速器、驱动器是否可以控制多台调速电机? Can one governor or the actuator control multiple motors?

不可以,因调速器、驱动器均为闭环控制。

No because the governor or driver are closed-loop control.

● 如何防止调速电机过载,速度不稳定? How to prevent the speed control motor from over-reliance or unstable speed?

调速电机调速原理为类似汽车油门控制,因此对于相同的负载,调速电机的功率应比定速电机大使其平均工作在50%功率状态,当负载变大,立即加大油门,避免速度下降。

The speed regulation principle of the speed regulating motor is similar to that of automobile throttle control. Therefore for the same load the power of the speed-regulated motor should be greater than that of the fixed-speed motor to make it work at an average of 50% power. When the load becomes larger the throttle should be increased immediately to avoid a speed drop.

● 三相电机可否调速? Can the three phase motor be adjusted?

三相电机可以调速,但必须使用变频器调速,不可用调速器调速。

The three phase can be adjusted but the frequency converter must be used for speed regulation.

● 电机“漏电”现象分析 Analysis of the "leakage" phenomenon of the motor

● 现象:在电机使用中,若电机不接地线,会发现电机有“漏电”现象产生,用电笔测,电机外壳带电。用电压表测量有时会测到100V以上的电压,以致让人误认为电机“漏电”了。

● 分析:由于电机绕组线圈与电机金属外壳之间等效于一个电容,当电机通工频交流电时,交流电可以通过电容流至外壳,导致外壳带电,此电流暂称为漏电电流,由于等效电容C容量很小,仅几千皮法,对于50Hz交流电其容抗很大,因此漏电流很小,即使人触摸到也仅有麻电感觉,不会伤人。

● 解决方法:将电机PE接地端子接地,使漏电流通过接地线释放至大地,就无“漏电”感觉。同时按照安规标准,为确保安全防止因电机烧坏或绝缘故障导致电机外壳带电伤人,电机PE接地端子必须接地。

● Phenomenon: In the use of the motor if the motor is not grounded it will be found that the motor has a "leakage" phenomenon. The electric pen is used to measure and the motor casing is charged. When measuring with a voltmeter a voltage above 100V is sometimes measured which makes people mistakenly think that the motor is "leakage".

● Analysis: Since the motor winding coil and the motor metal shell are equivalent to a capacitor when the motor is powered by AC power, the AC power can flow to the shell through the capacitor, which causes the shell to be charged. This current is temporarily called the leakage current. The capacity is very small only a few thousand picofarads and its capacitive reactance is very large for 50Hz alternating current, so the leakage current is very small even if it is touched by people it will only feel numb.

● Solution: Ground the PE ground terminal of the motor to release the leakage current to the ground through the ground wire so there is no "leakage" feeling. At the same time in accordance with safety standards in order to ensure safety and prevent the motor case from being damaged due to acetylene damage or insulation failure the PE ground terminal of the motor must be grounded.

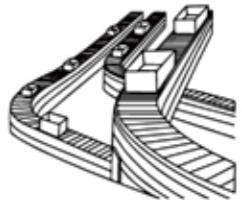

应用案例

Application case

● 自动传送系统 Automatic Transport System

于简易定位需求场合,可利用无刷马达缓慢加速,缓慢减速及刹车功能,做出相当顺畅的动作。

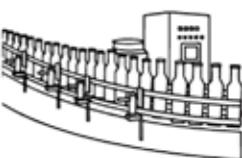

In the situation of simple positioning requirements can use brushless motor slow acceleration slow deceleration and braking function make a very smooth action.

● 食品生产线 Food Production Line

需要马达体积小,出力大,高寿命,无污染高速及低速随时转换,需要响应速度快的生产线上。

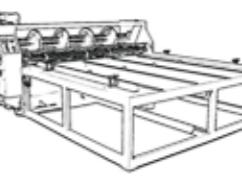

Need small motor volume large output, high life pollution-free high-speed and low-speed conversion at any time the need to respond to the rapid production line.

● 印刷设备 Printing equipment

需要马达体积小,速度快,节能,运行平稳,出力大,经济等需求

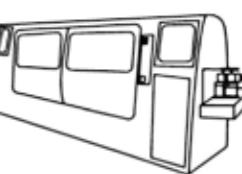

Motor needs small volume high speed energy-saving smooth operation large output economic and other needs.

● 半导体生产线 Semiconductor Production Line

使用无刷马达,可以大量减少配线,同时并降低机械设备所占用的空间,进而降低厂房使用面积,达到整体费用降低的目的。

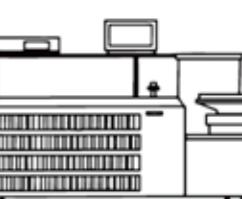

The use of brushless motor can greatly reduce wiring, and reduce the space occupied by mechanical equipment thus reducing the use of plant area to reduce the overall cost.

● LED制造设备 LED Manufacturing Process Equipment

需要马达体积小,高速高稳定特性,低温升,高响应。

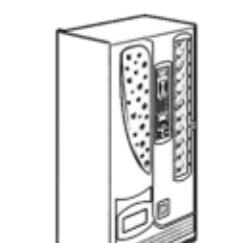

The Motor needs small volume high speed and high stability low temperature rise and high response.

● 自动贩卖机 Vending machine

需要马达体积小,节能,寿命高,低噪音,环保及刹车功能

Small Motor volume energy saving high life low noise environmental protection and braking function are needed.

● 包装机械 Packaging machinery

需要马达低频运行良好,全方位保护功能,运转平稳,强度高,停机响应速度快等需求。

Low-frequency operation of the motor needs good, all-round protection function smooth operation high strength fast shutdown response speed and other needs.
