## 1 Overview

ADL200 single phase electric meter is designed for single phase active energy measurement on low voltage system, in the same time it can measure the electrical parameters like voltage, current, power and so on. There is also RS485 can be chosen. This electricity meter has advantages of smaller volume, high precision, good EMC, easily installing etc, All meters meet the related technical requirements of electricity meter in the IEC62053-21, IEC62053-22 standards.

### 2 Function

Function	Function description	Function provide
Measurement of kWh	Single-phase active kWh (positive and negative), 3 months historical energy data frozen storage	∎
Measurement of electrical parameters	Voltage, Current, Active power, Reactive power, Apparent power, Power factor and Frequency	•
LCD Display	8 bits section LCD display	
Key programming	3 keys to set parameters like code, address, baud rate, multi-tariff and communication protocol	
Pulse output	Active energy pulse output	
Multi-tariff	Adapt 4 time zones, 2 time interval lists, 14 time interval by day and 4 tariff rates	□F
Communication	Communication interface: RS485, Communication protocol: MODBUS-RTU	

( $\blacksquare$ : Standard;  $\Box$ : Optional)

## 3 Technical parameter

#### 3.1 Electric performance

lonnance		
	Reference	AC 220V
	voltage	
	Voltage	AC 75~260V
Input voltage	range	
input voltage	Reference	50Hz
	frequency	
	Power	<10VA
	consumption	
	Basic current	10A
	Maximum	80A
T (	current	
Input current	Starting	4‰Ib
	current	
	Consumption	<4VA
	Accuracy of	1 class
Measurement	measuring	
performance	Range of	000000.00~99999999kWh
	measuring	
Clock accuracy		Error≤0.5s/d
Active pulse	Pulse width	80±20ms
Active pulse	Pulse constant	1000imp/kWh
	Interface	RS485(A+、B-)
Communicati	Connection	Shielded twisted pair conductors
on	mode	
	Protocol	MODBUS-RTU

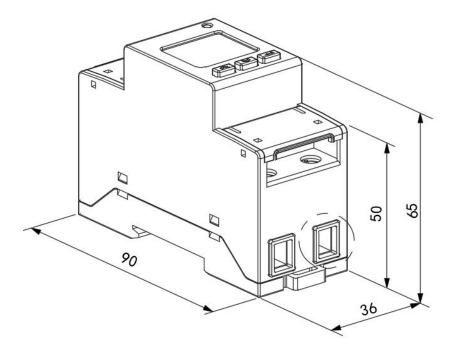

#### 3.2 Mechanical performance

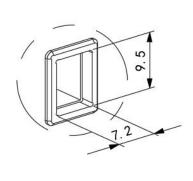

Outline	Length	Х	90mm×36mm×65mm
	Width	$\times$	
	Height		
Strong current	<1.8Nm		
terminal			
Torque			

### 3. 3 Work environment

	Work	-25°C~55°C
Temperature	temperature	
range	Storage	-40°C~70°C
	Temperature	
Relative humidity		≤95%(No condensation)
Altitude		<2000m

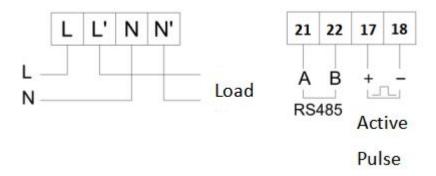

#### 4 **Outline (unit: mm)**

Meter outlook and size

5 wiring and installing

#### 6 Diagnosis, analysis and elimination of common faults

#### 6.1 Auxiliary power failure

Failure performance: the meter flashes and does not light up after being powered on.

**Troubleshooting:** 1. Check whether the wiring of the auxiliary power supply is consistent with the wiring diagram of the instrument, and whether the wiring is loose or falling off;

2. Use a multimeter to measure whether the input voltage value of the auxiliary power supply is within the normal working voltage range of the instrument.

6.2 Signal input failure

Failure performance: After the meter is powered on, the display power or energy count is not accurate.

Troubleshooting: Switch the display interface of the meter to the power (active P, power factor  $\lambda$ ) interface, check whether the power display is negative and whether the power factor is between 0.9-0.95, and then check whether the input and output of the current signal line are reversed (That is, the incoming line of the current must be consistent with the incoming end of the instrument), And consistent with the wiring on the meter.

6.3 communication failure

Failure performance: After the meter is powered on, it cannot communicate with the host computer normally.

**Troubleshooting:** 1. The voltage value between the communication output A and B of the measuring instrument should be between +(4.4-4.5)V;

2. Check whether the communication wiring method is correctly wired according to the wiring diagram (that is, the communication terminal A/B of the instrument should correspond to the communication serial port A/B);

#### 7 Operation and display

#### 7.1 Key description

Key icon	Key name	Key function
	Key up	View voltage and current in the view interface Up and flashing shift in the
		programming interface
(i		View power in the view interface
N N	Kay dawn	Scroll down and modify flashing
	Key down	bits in the programming interface
		View electrical energy in the
		viewing interface
d b	Key setting	Long press 3S to enter/exit the
~		menu
		Short press OK in the
		programming interface to save the
		settings

#### 7.2 display description

Show total energy when connected. Change information while pressing down key. Display information as following:

	U, I, F, Time, MODBUS Address, Baud, parity, Version, ALL-display;			
×	Total active power, total reactive power, total apparent power, total power factor;			
Total active energy, forward active total energy, reverse active total energy, t				

active spike energy, total active peak energy, total active flat energy, total active				
valley energy, total reactive energy, forward reactive total energy, reverse total				
reactive energy, total reactive spike energy, total reactive peak energy, total				
reactive flat energy, total reactive valley energy.				

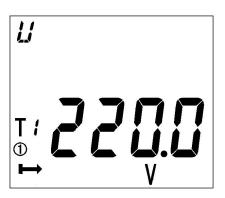

Note:

1. Listed above are the names of all display interfaces of the ADL200 meter with double rate function. Three buttons can switch different types of display content, the switching sequence is as described above;

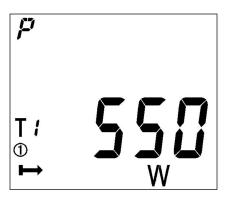

2. For the ADL200 meter without the double rate function, it does not display the date, time and various types of time-sharing energy (the energy in the four rate periods of sharp, peak, flat and valley).

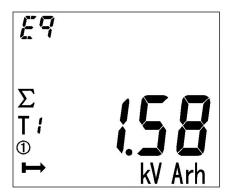

Current total active energy(6961.96kWh)

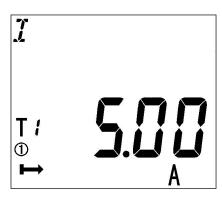

Voltage

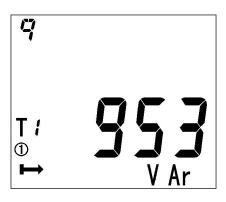

Current total active power 550W

Current total reactive energy

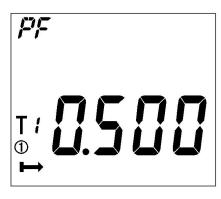

Current

Current total reactive power 953VAr

5		
<b>T</b> <i>i</i> ⊕	  .	

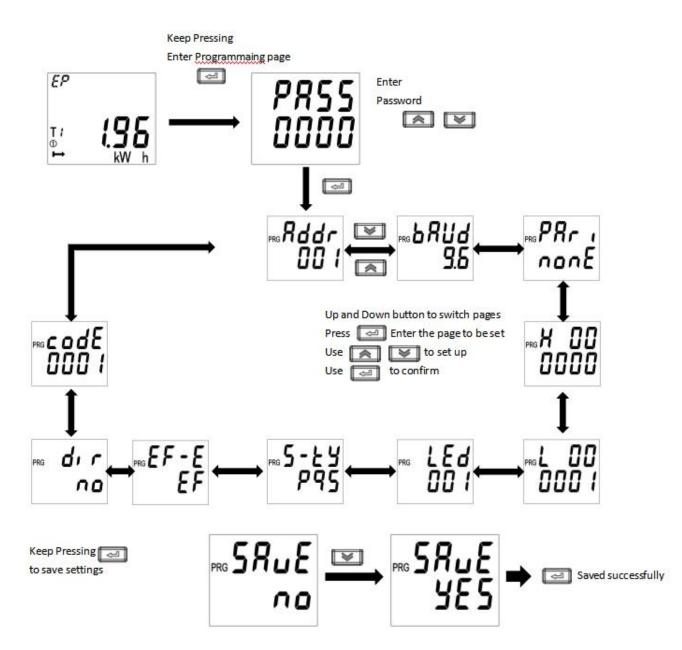

Current total apparent power 1.100kVA

Current total power factor 0.500

Note: The above is just a part of the display interface. The display mode of other interfaces is similar to the above figure. You can judge the display meaning according to the information displayed on the interface.

7.3Programming display menu

Press at any main menu and get in	RSS	interface	e, and then press	show	р. 1000 <sub>, 1</sub>	and enter
the code. If you enter a wrong code, it will show "000	00" ar	nd enter th	ne code again; and	if you enter a ri	ght code	, you can
set the parameter. After setting the parameter, it will s without save by pressing $n_0$ .	show	SRuE	and save the chan	ge by pressing	5. YES	and quit

#### 7.4 Item can be set

	Setting item description						
Maara		Secondly menu					
Mum	Symbol	Meaning	Range				
1 ADDR		Communication	1-254				
1	ADDK	address	1-2.54				
2	2 Devid Devid antime		1200,2400,4800,9600,				
2	Baud	Baud setting	19200、38400				
3	Pari	Parity setting	None、Odd、Even				
4	LED	Background light	0-255 minutes, 0 ever				
4 LED		setting	bright				
5	S-TY	Apparent power	PQS,RMS				
5	5-11	calculation	rys,kms				
6	EF-E	Set multi-tariff	EF-YES				

#### Setting item description

			E-NO
7	DIR	Current direction	no-forward
/	DIK		yes-reverse
8	CoDE	Code setting	1-9999

## 8 Communication description

#### 8.1 Communication protocol

The meters adapt Modbus . Please refer to the relevant standards for more information. The multi-tariff data mean nothing when multi-tariff function (F) is not applied.

#### 8.2 MODBUS Address list

Address	Variable	Length	Attribut	Note
			es
