ADL Series DIN-Rail Mounted Electric Energy Meter

Installation and Operation Instructions V1.0

Acrel Electric Co., Ltd.

Our Company reserves the right to modify the product specifications described in this manual without further notice. Please consult your local agent for the current specifications of this product befo**1 Overview**

ADL series DIN-rail mounted multifunctional electric energy meter is an intelligent instrument mainly designed for new energy power generation systems such as photovoltaic grid-connected system, micro inverter system, energy storage system, AC coupling system, etc. The product has the advantages of high precision, small volume, high respondent speed and convenient installation. The product has the features of sampling, metering and monitoring power parameters, communicating with an inverter or an energy management system (EMS), realizing the functions of preventing reverse flow, regulating power generation, charging and discharging batteries according to real-time power and accumulated electric energy, and realizing bidirectional metering and household distributed photovoltaic energy management.

2 Description of Model

ADL☐-CT
— External CT
200N:Single-phase
400N-Three-phase
Din rail energy meter
3 List of Functions

Table 1 List of Function Descriptions

Function	Descriptions	ADL200N-CT	ADL400N-CT
Electric energy	Active energy metering (forward and reverse)	■	■

metering		ADL200N-CT	ADL400N-CT
	Reactive energy metering (forward and reverse)	■	■
	Split-phase energy	□	■
Electric quantity measurement	U, I	■	■
	P, Q, S, PF, F	■	■
LCD display	Segmented LCD display	■	■
Key programming	ommunication, transformation ratio and other parameters can be programmable by the key	□	■
Pulse output	Active pulse output	■	■
LED alarm	Operation instructions	□	■
Communication	RS485：Modbus RTU	■	■

4 Technical Parameters

Table 2　Description of Technical Parameters

Item			Performance Parameters	
Model Series			ADL200N-CT	ADL400N-CT
Measurement		Grid	Single-phase	Three-phase four-wire, three-phase three-wire, single-phase three-wire
	Voltage	Rated voltage	230	Single-phase: 240/480V
				Three-phase:3×230/400V、3×277/480V
		Overload	1.2 times rating (continuous) 2 times the rating for 1 second	
		Power consumption	<0.2VA	
		Accuracy class	Error ±0.5%	
	Current	Input current	80A, 120A, 200A, 300A	80A, 120A, 200A, 300A, 3×80A, 3×120A, 3×200A, 3×300A
		Overload	1.2 times rating (continuous) 2 times the rating for 1 second	
			<0.2VA	

|		
	Power consumption	
	Accuracy class	Error ±0.5%
	Power	Active, reactive, apparent power, error ±0.5%
	Grid frequency	45~65Hz, error ±0.5%
	Response rate	≤100ms (voltage, current, power) ≤1s (electrical energy)
Metering	Electric energy	Active energy ： Class B (split current transformer) /Class C (closed current transformer) Reactive energy (Class 2 accuracy)
electromagnetic compatibility	Electrostatic discharge immunity class III	
	Electrical fast transient burst immunity class IV	
	Surge (shock) immunity Class IV	
Security	Power frequency withstand voltage	Between communication and signal input, AC4kV 1min
	Insulation resistance	Input and output terminals to casing >100MΩ
Communication	Interface and communication protocol	RS485 interface and Modbus RTU protocol
	Communication address range	Modbus RTU:1~ 247；
	Baud rate	Support 1200bps-38400bps
Environment	Operating temperature	-40℃～+70℃
	Storage temperature	-40℃～+70℃
	Relative humidity	≤95% (without condensation)
	Altitude	≤3000m

6.2 Functional Terminal
Figure 8 Communication and Pulse Connection

7 Main Functional Features

7.1 Measurement Function

It can measure total power parameters including voltage U, current I, active power P, reactive power Q, apparent power S, power factor PF and frequency. Wherein, the voltage U is reserved with 1 decimal place, the frequency F is reserved with 2 decimal places, the current I is reserved with 2 decimal places, and the power P is reserved with 3 decimal places.

For example, U = 220.1V, f = 49.98Hz, I = 1.99A, P = 0.439kW

The above electrical parameter high-speed response registers are also provided with the instrument, see Chapter 9 "Communication Instructions".

7.2 Metering Function

It can measure the current combined active electric energy, forward active electric energy, reverse active electric energy, forward reactive electric energy and reverse reactive electric energy.

8 Operation and Display

8.1 Key Function Description

Table 4 Key Function Description

Key Icon	Key Name	Key Functions
▲	Up	When switching the interface to the left, show left shift and flicker shift in programming interface
▼	Down	When switching the interface to the right, show right shift and modify flicker in programming interface
↵	Programming confirmation	View submenu, confirm the saving setting in the programming interface

Figure 9 Description of Display Interface

Note: The above is only a part of the display interface. Phase A, B and C can be switched by Enter key (phases between AB, BC and AC are for the same reason). The display mode of other interfaces is similar to that shown in the above figure. The display meaning can be judged according to the information displayed in the interface.

8.3 Programming Interface

When in any display item, press [⏎] for a long time to enter the "PASS" interface. There is a prompt for password, and the default password is 0001, and then press [⏎] again. If the password is incorrectly entered, return to "0000" to re-enter; If the password is entered correctly, the parameters can be set. Press [⏎] for a long time to enter the "SAVE" interface, press [∨] to switch to "YES", then press [⏎] to SAVE and exit, and press [⏎] when switching to "NO" to exit directly, with no need to "SAVE".

Un
82.5 V

长按[⏎]进入编程页面
Long press [⏎] to enter the programming interface

PASS 0000

通过[∧][∨]输入密码
Enter the password by [∧][∨]

PASS 0001

点[⏎]进入编程页面

8.4 Settable Data Items

Table 7 Description of Setting Menu

Symbol	Meaning	Scope
Addr	slave address	1-247
bAud	Baud rate	38.4：38400 19.2：19200 9.6：9600 4.8：4800 2.4：2400 1.2：1200
PAri	parity	None、Even、Odd
LEd	Backlight time (reserved)	0-999s
PL	Grid	3P4L: Three-phase four-wire 3P3L:三相三线 3P3L: Three-phase three-wire
UPri	Primary voltage	0.1-9999999.9V
iPri	Primary current	0.01-999999. 99A
UMSK	Voltage shielding value	0-99.99%
iMSK	Current shielding value	0-99.99%
PULS	Pulse constant	1-99999
S-ty	Apparent power calculation mode	RMS: RMS calculation method PQS: PQS calculation method
diSP	Power-on default interface	Auto: Automatic wheel display Others: Other interfaces
PHSq	Reserved	
CoDE	Password	1-9999

9 Communication Instructions

The instrument RS485 communication interface supports MODBUS-RTU communication protocol. The baud rate of communication interface can be set between 1,200bps, 2,400 bps, 4,800 bps, 9,600bps, 19,200 bps and 38,400 bps, and the check bit is no check.

The RS485 communication interface of the instrument requires shielded twisted pair connection, and the layout of the whole grid should be considered when wiring: For example, the length and direction of communication cable, the position of upper computer, the matching resistance at the end of the grid, the communication converter, the scalability of the grid, the coverage of the grid, the electromagnetic interference of the environment and other factors should be considered comprehensively.

Note:

1. It shall strictly construct according to the requirements in the wiring project;

2. For instruments that do not need communication temporarily, they should be connected to RS-485 grid for diagnosis and test;

3. When connecting RS-485 cable, try to use two-color twisted pair. All 485 communication ports "A" are terminated in the same color, and "B" is terminated in another color.

4. The length of RS-485 bus (from the communication interface of the upper computer to any connected instrument terminal communication interface) shall not exceed 1,000 meters.

9.1 Address Table

Meter supports 03H command and 10H command in MODBUS-RTU protocol, in which 03H for reading multiple registers and 10H for writing multiple registers. Please check the protocol data format by yourself. The following table is the register address table of the meter:

Table 8 Communication Address Table

Address	Name	R/W	Length (Bytes)	Type	Unit	Note
1000H	slave address	R/W	1	uint16		1-247
1001H	baud rate	R/W	1	uint16		1200，2400，4800，9600，19200，38400，
	parity	R/W	1	uint16		0：None 1：Odd 2：Even 0：1　1stop 1：1.5　1.5stop 2：2　2stop
1010H	Grid	R/W	1	uint16		0:3P4L 1:3P3L
1011H	rated second voltage	R/W	1	uint16	0.1V	0.1-999. 9V
1012H	rated second current	R/W	1	uint16	0.01A	0.01-999. 99A
1015H	rated primary voltage	R/W	1	uint32	0.1V	0.1-99999.9V
1017H	rated primary current	R/W	1	uint32	0.01A	0.01-9999. 99A
101DH	Password	R/W	1	uint16		1-9999
